PI RAI3, useful for preventing, treating or ameliorating chronic obstructive
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
PI

PT of COPD.

XX Disclosure; SEQ ID NO 31; 301pp; English.

XX The present sequence is that of a sense PCR primer based on DNA encoding
XX a peptide ADI28458 from human G-protein coupled receptor retinoic acid
XX induced 3 (RAI-3) ADI28460. The peptide was identified in studies of RAI-
XX 3 phosphorylation in response to cigarette smoke. The primer can be used
XX in a PCR to identify individuals at risk for developing chronic
XX obstructive pulmonary disease (COPD). RAI-3 is tyrosine phosphorylated
XX and/or is associated/complexed with tyrosine phosphorylated proteins only
XX in cells that have been exposed to cigarette smoke. Since RAI-3 is
XX primarily expressed in lung tissue, and since cigarette smoke is a major
XX causative factor of COPD, RAI-3 provides a novel cellular target for
XX identifying modulators, e.g. agonists or antagonists, useful for the
XX treatment and/or prevention of COPD and related disorders such as
XX emphysema and chronic bronchitis. RAI-3 modulators, e.g. agonists and
XX antagonists, especially antisense compounds, can be used to treat COPD
XX and other disorders an diseases associated with regulation of NF-kB
XX and/or its associated or interacting signaling molecules. Single
XX nucleotide polymorphisms (SNPs) detected in the RAI-3 gene are useful for
XX determining COPD association in individuals. RAI-3 nucleic acid molecules
XX and polypeptides are useful for preventing, treating or ameliorating
XX disorders related to aberrant GPCR signaling or cell cycle regulation,
XX pulmonary disorders, inflammatory lung disorders, COPD, the underlying
XX symptoms of COPD, COPD-related disorders or conditions, autoimmune
XX disorders, disorders related to hyperimmune activity, inflammatory
XX conditions, disorders related to aberrant acute phase responses,
XX hypercongenital conditions, birth defects, necrotic lesions, wounds,
XX organ transplant rejection, renal diseases, ischaemia-reperfusion injury,
XX heart disorders, disorders related to aberrant signal transduction,
XX proliferation disorders, cancers, HIV infection, asthma, cystic fibrosis,
XX pulmonary fibrosis, ulcerative colitis, cerebral infarct, myocardial
XX infarct, diabetic nephropathy, allergic rhinitis, Crohn's disease,
XX atherosclerosis, rheumatoid arthritis, inflammatory/autoimmune disorders,
XX glioblastoma, pulmonary small cell undifferentiated carcinoma, carcinoma
XX of the breast, colon, lung, ovary, pancreas, prostate, non-Hodgkin's
XX lymphoma, disorders associated with aberrant cell adhesion, I-CAM
XX function and/or regulation, E-selectin function and/or regulation, or
XX aberrant NF-kB function and/or regulation (all claimed).

XX
CC The present sequence is that of DNA encoding a peptide corresponding to
CC amino acids 340-353 of a human G-protein coupled receptor, denoted
CC retinoic acid induced 3 (RAI-3) protein ADI28460. The peptide was
CC identified in studies of RAI-3 phosphorylation in response to cigarette
CC smoke. Primers based on this sequence can be used in a PCR to identify
CC individuals at risk for developing chronic obstructive pulmonary disease
CC (COPD). RAI-3 is tyrosine phosphorylated and/or is associated/complexed
CC with tyrosine phosphorylated proteins only in cells that have been
CC exposed to cigarette smoke. Since RAI-3 is primarily expressed in lung
CC tissue, and since cigarette smoke is a major causative factor of COPD,
CC RAI-3 provides a novel cellular target for identifying modulators, e.g.
CC agonists or antagonists, useful for the treatment and/or prevention of
CC COPD and related disorders such as emphysema and chronic bronchitis. RAI-
CC 3 modulators, e.g. agonists and antagonists, especially antisense
CC compounds, can be used to treat COPD and other disorders an diseases
CC associated with regulation of NF-kB and/or its associated or interacting
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
CC preventing, treating or ameliorating disorders related to aberrant GPCR
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
CC disorders or conditions, autoimmune disorders, disorders related to
CC hyperimmune activity, inflammatory conditions, disorders related to
CC aberrant acute phase responses, hypercongenital conditions, birth
CC defects, necrotic lesions, wounds, organ transplant rejection, renal
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
CC related to aberrant signal transduction, proliferation disorders,
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
CC neuropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,

DR New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
PT
XX Claim 1; SEQ ID NO 1937; 87pp; English.
PS
XX The invention relates to polynucleotide and polypeptide sequences
XX associated with cancer, particularly colon cancer. Also disclosed are (i)
XX an expression vector comprising the polynucleotide, (ii) a host cell
XX transformed or transfected with the expression vector, (iii) an isolated
XX antibody, or its antigen-binding fragment, which specifically binds to
XX the polypeptide, (iv) a method of detecting or determining the presence
XX of cancer in a patient, (v) a fusion protein comprising at least one of
XX the polypeptides, (vi) an oligonucleotide that hybridises to the
XX polynucleotide sequence under highly stringent conditions, and (vii) a
XX method of stimulating and/or expanding T cells specific for a tumour
XX protein. The polypeptide specifically comprises the amino acid sequence
XX of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
XX frames (ORFs) of C636S. These polypeptides are encoded by the
XX polynucleotide sequences, where both are capable of eliciting a humoral
XX and/or cellular immune response. The polynucleotides, polypeptides, and
XX antibodies are useful for diagnosing, preventing or treating cancer,
XX particularly colon cancer. The polynucleotide and polypeptide sequences
XX are also useful in DNA strand invasion, antisense inhibition, mutational
XX analysis, nucleic acid purification, isolation of transcriptionally
XX active genes, blocking or transcription factor binding, genome cleavage
XX or in situ hybridisation, and as enhancers of transcription or
XX biomarkers. This sequence represents a human colon cancer associated
XX cDNA. Note: The sequence data for this patent was obtained in electronic
XX format directly from the USPTO web site at seqdata.uspto.gov

XX
PR New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
XX Claim 1; SEQ ID NO 1811; 87pp; English.
XX
XX The invention relates to polynucleotide and polypeptide sequences
XX associated with cancer, particularly colon cancer. Also disclosed are (i)
XX an expression vector comprising the polynucleotide, (ii) a host cell
XX transformed or transfected with the expression vector, (iii) an isolated
XX antibody, or its antigen-binding fragment, which specifically binds to
XX the polypeptide, (iv) a method of detecting or determining the presence
XX of cancer in a patient, (v) a fusion protein comprising at least one of
XX the polypeptides, (vi) an oligonucleotide that hybridises to the
XX polynucleotide sequence under highly stringent conditions, and (vii) a
XX method of stimulating and/or expanding T cells specific for a tumour
XX protein. The polypeptide specifically comprises the amino acid sequence
XX of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
XX frames (ORFs) of C636S. These polypeptides are encoded by the
XX polynucleotide sequences, where both are capable of eliciting a humoral
XX and/or cellular immune response. The polynucleotides, polypeptides, and
XX antibodies are useful for diagnosing, preventing or treating cancer,
XX particularly colon cancer. The polynucleotide and polypeptide sequences
XX are also useful in DNA strand invasion, antisense inhibition, mutational
XX analysis, nucleic acid purification, isolation of transcriptionally
XX active genes, blocking or transcription factor binding, genome cleavage
XX or in situ hybridisation, and as enhancers of transcription or
XX biomarkers. This sequence represents a human colon cancer associated
XX cDNA. Note: The sequence data for this patent was obtained in electronic
XX format directly from the USPTO web site at seqdata.uspto.gov

XX
XX Novel human proteins having hydrophobic domains used for research and
PT diagnostic purposes.
XX
XX Claim 3; Page 88; 117pp; English.
XX
XX This sequence represents the hydrophobic domain containing protein, clone
CC HP10549 coding region. The sequence is isolated from a human stomach
CC cancer cell line. The invention relates to human proteins with
CC hydrophobic domains, the DNA and the cDNA encoding them. The
CC polynucleotides and proteins are predicted to have biological activities
CC which make them suitable for treating, preventing or ameliorating medical
CC conditions in humans and animals. Suggested activities include
CC nutritional activity (nutritional source or supplement); cytokine and
CC cell proliferation/differentiation activity; immune stimulating (e.g. as
CC vaccines) or suppressing activity (e.g. to treat various immune
CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
CC inflammation, Guillain-Barre syndrome, myasthenia gravis, graft-versus-host disease
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
CC organ transplantation); haematopoiesis regulating activity (e.g. in
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
CC activity (e.g. wound healing and tissue repair, ulcers, burns,
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
CC activity; haemostatic and thrombolytic activity (e.g. treating
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
CC tumour inhibition activity. The polynucleotides are also stated to be
CC useful for gene therapy. Other activities include inhibiting infections
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;
CC treatment of depression; treatment of pain; hormonal or endocrine
CC activity. The polynucleotides may also be used for recombinant expression
CC of the protein

XX Novel isolated polypeptide encoded by breast cancer marker gene, useful
PT for diagnosing, staging, monitoring, prognosing and treating diseases
PT associated with breast cancer.

XX Disclosure; Page 187-188; 725pp; English.

XX The invention relates to an isolated polypeptide encoded by a breast
CC cancer marker gene comprising any of 1417 21-805 nucleotide sequences,
CC given in the specification. The methods of the invention are useful for
CC diagnosing patients having an identified breast cancer or symptoms
CC associated with breast cancer, to diagnose breast cancer or its
CC precursors, and for monitoring the efficacy of treatment of a breast
CC cancer patient (e.g. efficacy of chemotherapy). The methods are also
CC useful for evaluating a patient before, after or during therapy, to
CC evaluate the reduction in a tumour burden. The breast cancer marker gene
CC proteins are useful as immunogens for raising antibodies, by immunising a
CC mammal with a breast cancer marker protein. The marker proteins are
CC useful as bait proteins in a two-hybrid or three-hybrid assay, to
CC identify other proteins which bind to or interact with the marker
CC proteins. The breast cancer marker genes are useful as surrogate marker
CC genes for one or more disorders, disease states or conditions leading to
CC disease states, in particular, breast cancers. The breast cancer marker
CC genes are useful as pharmacodynamic marker genes. An antibody which
CC selectively binds to a protein of a breast cancer marker gene is useful
CC for treating cancers, particularly breast cancers. The host cell of the
CC invention is useful for producing non-human transgenic animals. This
CC polynucleotide sequence represents one of the breast cancer marker genes
CC of the invention

PT Novel mammalian G protein coupled receptors, useful for identifying
PT compounds that modulates diagnosing and treating disease condition
PT associated with GPCR dysfunction e.g. autoimmune diseases, angina
PT pectoris, Parkinson's disease.
XX
XX Claim 151; SEQ ID NO 1137; 542pp; English.

XX The invention relates to human and mouse G protein-coupled receptors
CC (GPCRs) and nucleic acids encoding them. The invention also relates to
CC sequences at least 90% identical to the GPCR proteins and nucleic acids
CC of the invention; methods of treating, preventing or diagnosing diseases
CC associated with GPCRs of the invention; methods of screening for
CC compounds useful in the treatment of GPCR-related diseases; a transgenic
CC mouse comprising a GPCR gene of the invention; a mouse comprising a
CC mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived
CC from the transgenic mice; kits comprising several mice, each of which has
CC a mutation in a different GPCR gene of the invention; and kits comprising
CC probes which hybridise to GPCR polynucleotides of the invention. The
CC invention further discloses variants of the GPCR polypeptides and vectors
CC comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may
CC be used in the diagnosis, treatment or prevention of a wide variety of
CC diseases including neurological disorders (e.g., Alzheimer's disease,
CC depression, diabetic neuropathy, Parkinson's disease or schizophrenia);
CC disorders of the adrenal gland; disorders of the colon or intestine
CC (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel
CC syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or
CC myocardial infarction); muscular disorders; blood disorders (e.g.,
CC anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or
CC AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid
CC arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g.,
CC obesity, enzyme deficiency-related diseases or vitamin deficiency-related
CC diseases); and disorders of the kidney, liver, lung, breast, ovary,
CC uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and
CC thyroid (e.g., cancers). The present sequence represents a GPCR-encoding
CC nucleic acid of the invention. Note: The full sequence data for this
CC patent did not form part of the printed specification; those sequences
CC not shown were obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX
XX The present polynucleotide encodes a polypeptide which is expressed in
XX mammalian skin cells. The polypeptide is useful for stimulating
XX keratinocyte growth and motility, inhibiting the growth of cancer cells,
XX modulating angiogenesis, inhibiting angiogenesis and vascularisation of
XX tumours, modulating skin inflammation, stimulating the growth of
XX epithelial cells, inhibiting the binding of human immunodeficiency virus
XX (HIV)-1 to leukocytes, and treating inflammatory disease, cancer and
XX neurological diseases. The polynucleotide can be used as a marker, in the
XX identification of genetic disorders, and for the design of
XX oligonucleotides for examining expression patterns

XX New polynucleotides and polypeptides encoded by the polynucleotides
PT isolated from skin cells, useful for treating skin wounds, cancers,
PT growth and developmental defects, inflammatory diseases, or for
PT modulating immune responses.
XX Claim 1; Page 175; 466pp; English.
XX The present invention provides the protein and coding sequences of cDNAs
CC isolated from human, murine and rat skin cell libraries. The sequences
CC can be used in the development of therapeutic agents useful in the
CC treatment of skin diseases, including skin wounds, cancer, growth
CC defects, developmental defects and inflammatory diseases. The proteins
CC have important roles in the induction of hair growth, cell proliferation
CC and cell-cell interaction, in maintaining tissue integrity, in wound
CC healing and in modulating immune responses. The present sequence is a
CC cDNA of the invention

XX Combination for research/diagnostic applications and for monitoring
PT treatment of e.g., cancer, comprises polynucleotides comprising a
PT fragment of gene encoding membrane-associated proteins, receptors or ion
PT channels.
XX
XX Claim 1; Col 215-216; 147pp; English.

CC The invention relates to a combination comprising several polynucleotide
CC sequences comprising a fragment of gene encoding membrane-associated
CC proteins, receptors or ion channels. The combination is useful as a
CC probe, for research and diagnostic applications, for monitoring the
CC expression of several expressed polynucleotides, in the diagnosis and
CC monitoring of treatment of pancreatic disease, cancer, immunopathology or
CC neuropathology, for investigating an individual's predisposition to the
CC above disease, in genetic or gene expression analysis of polynucleotide
CC sequences, to investigate cellular responses to infection or drug
CC treatment, as hybridisable array elements in a microarray, to purify a
CC subpopulation of mRNAs, cDNAs or genomic fragments in a sample, in
CC diagnostics, prognostics and treatment regimens, in drug discovery and
CC development, in toxicological and carcinogenicity studies, and in
CC forensics or pharmacogenomics, to monitor the progression of disease, to
CC monitor the efficacy of treatment, to diagnose the conditions of the
CC pancreas e.g. diabetes, pancreatic cholera, hyperlipidaemia or
CC fibrocystic disease, to diagnose a cancer e.g. leukaemia, adenocarcinoma
CC or sarcoma, to diagnose immunopathologies e.g. AIDS, allergies, anaemia,
CC asthma or gout, to diagnose neuropathologies e.g. Alzheimer's disease,
CC dementia or Huntington's disease, to rapidly screen large numbers of
CC candidate drug molecules and as query sequences against GenBank.
CC SwissProt, BLOCKS and PRINTS databases. The combination is employed to
CC fine tune the treatment regimen and thus the expression patterns
CC associated with undesirable side effects are avoided. The present
CC sequence represents a cDNA encoding a fragment of gene encoding human
CC membrane-associated proteins, receptors or ion channels

XX	Novel isolated antibody capable of binding to tumor-associated antigenic
PT	target polypeptide, useful for treating cell proliferative disorder e.g.
PT	cancer.
XX	
XX	Claim 1; SEQ ID NO 64; 337pp; English.
XX	
CC	The invention relates to a novel isolated antibody binding to a
CC	polypeptide having at least 80% sequence identity to a polypeptide having
CC	any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
CC	target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
CC	specification, a polypeptide having any one of (AEA00127-AEA00202),
CC	lacking its associated signal peptide, or an extracellular domain of a
CC	polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
CC	encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
CC	An antibody of the invention has cytostatic activity. The antibody is
CC	useful for inhibiting growth of a cell expressing TAT188, which involves
CC	contacting the cell with the antibody. The cell is a cancer cell chosen
CC	from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
CC	liver cell. The cancer cell is a mammalian cell, preferably a human cell.
CC	The antibody is also useful for detecting the level of TAT188
CC	polypeptide expressed in a test cell relative to a control cell, and for
CC	detecting the level of TAT188 polypeptide or a polypeptide having at
CC	least 80 % sequence identity to the TAT188 polypeptide sequence in a test
CC	cell relative to a control cell. The antibody is useful for treating a
CC	preventing a cell proliferative disorder associated with increased
CC	expression or activity of a polypeptide having at least 80 % identity to
CC	a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
CC	The method of the invention is useful for inhibiting the growth of a
CC	cancer cell. The present sequence encodes a polypeptide of the invention.

PT	Novel isolated antibody e.g. anti-El6 or anti-TAT112 antibody that binds
PT	to tumor-associated antigenic target polypeptide, useful for diagnosing
PT	or treating cancer.
XX	
PS	Claim 1; SEQ ID NO 64; 96pp; English.
XX	
CC	This invention relates to a novel isolated antibody, for example anti-El6
CC	or anti-TAT112 antibody, that binds to a tumor-associated antigenic
CC	target polypeptide (TAT) and that lacks an associated signal peptide
CC	sequence. The invention may be useful for the development of compounds
CC	with a cytostatic activity acting as antagonists of the TAT188
CC	polypeptide or RNA interference whilst the disclosed sequences may be
CC	useful for gene therapy. The invention is useful for inducing the death
CC	of a cell (such as a cancer cell chosen from breast, colon, rectum,
CC	endometrium, kidney, lung, ovary, skin and liver) to which it binds,
CC	inhibiting proliferation or promoting cell death of a cell expressing
CC	TAT188. In addition, the invention may be useful for detecting the level
CC	of TAT188 polypeptide in a test cell relative to a control cell, or
CC	treatng or preventing a cell proliferative disorder associated with
CC	increased expression of TAT188. The novel antibody of the invention is
CC	useful for inhibiting the growth of a cancer cell and may be useful for
CC	diagnosing or treating cancer. The present sequence is that of the human
CC	TAT143 cDNA which encodes a protein against which an antibody of the
CC	invention may be targeted.

XX PT Novel human proteins having hydrophobic domains used for research and
XX PT diagnostic purposes.
XX PS Claim 4; Page 111-113; 117pp; English.
XX XX
XX CC This sequence represents the hydrophobic domain containing protein, clone
XX CC HP10549 nucleotide sequence. The sequence is isolated from a human
XX CC stomach cancer cell line. The invention relates to human proteins with
XX CC hydrophobic domains, the DNA and the cDNA encoding them. The
XX CC polynucleotides and proteins are predicted to have biological activities
XX CC which make them suitable for treating, preventing or ameliorating medical
XX CC conditions in humans and animals. Suggested activities include
XX CC nutritional activity (nutritional source or supplement); cytokine and
XX CC cell proliferation/differentiation activity; immune stimulating (e.g. as
XX CC vaccines) or suppressing activity (e.g. to treat various immune
XX CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic
XX CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
XX CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin
XX CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
XX CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
XX CC organ transplantation); haematopoiesis regulating activity (e.g. in
XX CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
XX CC activity (e.g. wound healing and tissue repair, ulcers, burns,
XX CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
XX CC activity; haemostatic and thrombolytic activity (e.g. treating
XX CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
XX CC tumour inhibition activity. The polynucleotides are also stated to be
XX CC useful for gene therapy. Other activities include inhibiting infections
XX CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
XX CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
XX CC skin; effecting biorhythms or cardiac cycles; enhancing fertility;
XX CC treatment of depression; treatment of pain; hormonal or endocrine
XX CC activity. The polynucleotides may also be used for recombinant expression
XX CC of the protein

XX PT Transformation of cells with a fusion protein of an orphan receptor
XX PT protein with a fluorescent protein useful for identification of ligands
XX PT to the orphan receptor.
XX PS Example 4; SEQ ID NO 196; 594pp; Japanese.
XX CC This invention relates to a novel method of identifying ligands to an
XX CC orphan receptor protein which comprises transforming cells with DNA
XX CC encoding a fusion protein of the orphan receptor with a fluorescent
XX CC protein, so that the fusion protein is expressed in the cells for cell
XX CC membranes isolated from them) and contacting the cells with the potential
XX CC ligand to be tested. A suitable fluorescent protein for incorporation in
XX CC the fusion protein is green fluorescent protein (GFP), for example GFP-1,
XX CC wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the
XX CC identification of ligands binding to an orphan receptor protein.

XX DR Diagnosing breast cancer in a patient comprises detecting the level of
XX PT gene expression in cell or tissue samples, where a differential gene
XX PT expression is indicative of breast cancer.
XX PS Claim 1; SEQ ID NO 307; 260pp + Sequence Listing; English.
XX CC The present invention relates to methods of diagnosing breast cancer in a
XX CC patient, which comprise detecting the level of expression in a tissue
XX CC sample of two or more genes selected from those shown in ABT09867-
XX CC AB11112, where a differential expression of the genes indicates breast
XX CC cancer. The methods are useful in diagnosing, treating, detecting the
XX CC progression, and in monitoring treatment of breast cancer in patients.
XX CC The methods are also useful as a screening tool for agents that modulate
XX CC the onset or progression of breast cancer. The breast cancer genes may be
XX CC used as diagnostic markers for the prediction or identification of the
XX CC malignant state of breast tissue, for confirming the type and progression
XX CC of cancer, and for drug screening and assays. The present sequence is a
XX CC coding sequence of the invention. Note: The sequence data for this patent
XX CC did not form part of the printed specification, but was obtained in
XX CC electronic format directly from WIPO at

PT New G-protein coupled receptor-like retinoic acid induced gene 1 (GPCR-
PT like RAIG1) polypeptide and gene, useful for diagnosing or treating
PT metabolic disorders, e.g. obesity, anorexia, cachexia or diabetes.

XX Claim 10; Page 16-17; 150pp; English.

CC The present sequence is that of human G-protein coupled receptor-like
CC retinoic acid induced gene 1 (GPCR-like RAIG1). This is the human
CC homologue of murine GPCR-like RAIG1. The murine gene was shown to be
CC differentially regulated during fasting-feeding cycles in mice, with
CC moderate induction early in fasting, down-regulation with extended
CC fasting and 4-fold up-regulation with feeding in recovery from fasting.
CC The differentially expressed gene, its mRNA, and the encoded protein, can
CC each be manipulated to detect and treat metabolic disorders associated
CC with up- or down-regulation of GPCR-like RAIG1 activity, such as obesity,
CC anorexia, cachexia or diabetes

Claim 1; Fig 2; 43pp; English.

XX

CC This sequence encodes retinoic acid-inducible gene 1 (RAIG1) polypeptide.

CC RAIG1 is an orphan G-protein coupled receptor (GPCR) located on

CC chromosome 12. RAIG1 shows a restricted expression pattern compared to a

CC related receptor, GPCR5B, which is widely expressed in peripheral and

CC central tissues. The RAIG1 cDNA and polypeptide sequence may be used in

CC the method of the invention for screening for and/or diagnosis of

CC carcinoma in a subject, and/or monitoring the effectiveness of carcinoma

CC therapy. The method comprises detecting and/or quantifying in a

CC biological sample obtained from the subject an RAIG1 polypeptide and a

CC nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule

CC are useful in the manufacture of a medicament for the treatment of

CC carcinoma, where the composition is a vaccine. An agent which interacts

CC with or causes change in the expression or activity of an RAIG1

CC polypeptide or nucleic acid molecule, is also useful in the manufacture

CC of a medicament for the treatment of carcinoma that is breast cancer,

CC pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon

CC cancer and/or osteosarcoma. They can also be used in the diagnosis and

CC screening of such carcinomas.

XX Novel isolated or purified polypeptide encoded by genes associated with

XX intestinal epithelium or M cell development, differentiation or function,

XX useful for treating autoimmune diseases and infectious diseases.

XX Claim 1; SEQ ID NO 283; 152pp; English.

XX The invention comprises DNA sequences which are associated with

XX intestinal epithelium and peyer's patch M cells. The DNA sequences of the

XX invention are useful for assessing, modifying, modulating or regulating

CC intestinal epithelium or M cell development. The DNA sequences of the
CC invention are also useful in the treatment of: inflammatory bowel
CC disease, glutenenteropathy, infectious diseases, autoimmune diseases
CC (e.g. haemolytic anaemia, rheumatoid arthritis, dermatitis, Grave's
CC disease, multiple sclerosis, allergy, asthma and diabetic mellitus),
CC diseases or disorders of the immune system, hypersensitivity,
CC anaphylaxis, and blood group incompatibility. The present nucleic acid
CC represents an intestinal epithelium/peyer's patch M cell-associated DNA
CC sequence of the invention. NOTE: The present sequence is not shown in the
CC specification, but has been retrieved from the WIPO website.

XX PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
XX length cDNAs defined in the specification, and for the detection and/or
XX diagnosis of the abnormality of the proteins encoded by the full-length
XX cDNAs.

XX PS Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.

XX CC The present invention describes primer sets for synthesizing 5602 full-
XX length cDNAs defined in the specification. Where a primer set comprises:
XX (a) an oligo-dT primer and an oligonucleotide complementary to the
XX complementary strand of a polynucleotide which comprises one of the 5602
XX nucleotide sequences defined in the specification, where the
XX oligonucleotide comprises at least 15 nucleotides; or (b) a combination
XX of an oligonucleotide comprising a sequence complementary to the
XX complementary strand of a polynucleotide which comprises a 5'-end
XX sequence and an oligonucleotide comprising a sequence complementary to a
XX polynucleotide which comprises a 3'-end sequence, where the
XX oligonucleotide comprises at least 15 nucleotides and the combination of
XX the 5'-end sequence/3'-end sequence is selected from those defined in the
XX specification. The primer sets can be used in antisense therapy and in
XX gene therapy. The primers are useful for synthesizing polynucleotides,
XX particularly full-length cDNAs. The primers are also useful for the
XX detection and/or diagnosis of the abnormality of the proteins encoded by
XX the full-length cDNAs. The primers allow obtaining of the full-length
XX cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
XX AAH13633 to AAH18742 represent human cDNA sequences; AAH92446 to AAH95893
XX represent human amino acid sequences; and AAH13629 to AAH13632 represent
XX oligonucleotides, all of which are used in the exemplification of the
XX present invention

XX
XX New nucleic acid molecule encoding a human G-protein coupled
XX receptor, RAI3, useful for preventing, treating or ameliorating chronic obstructive
XX pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
XX of COPD.
XX
XX Claim 21; SEQ ID NO 18; 301pp; English.
XX
XX The present sequence is that of cDNA encoding a human G-protein coupled
XX receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
XX Proteomic methods were used to isolate cigarette smoke-inducible
XX tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
XX identified as being tyrosine phosphorylated and/or as being
XX associated/complexed with tyrosine phosphorylated proteins only in those
XX cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
XX expressed in lung tissue, and since cigarette smoke is a major causative
XX factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
XX novel cellular target for identifying modulators, e.g. agonists or
XX antagonists, useful for the treatment and/or prevention of COPD and
XX related disorders such as emphysema and chronic bronchitis. RAI-3
XX modulators, e.g. agonists and antagonists, especially antisense
XX compounds, can be used to treat COPD and other disorders and diseases
XX associated with regulation of NF-kB and/or its associated or interacting
XX signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
XX the RAI-3 gene are useful for determining COPD association in
XX individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
XX preventing, treating or ameliorating disorders related to aberrant GPCR
XX signaling or cell cycle regulation, pulmonary disorders, inflammatory
XX lung disorders, COPD, the underlying symptoms of COPD, COPD-related
XX disorders or conditions, autoimmune disorders, disorders related to
XX hyperimmune activity, inflammatory conditions, disorders related to
XX aberrant acute phase responses, hypercongenital conditions, birth
XX defects, necrotic lesions, wounds, organ transplant rejection, renal
XX diseases, ischaemia-reperfusion injury, heart disorders, disorders
XX related to aberrant signal transduction, proliferation disorders,
XX cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
XX ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
XX nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
XX rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
XX pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
```

```
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
CC regulation (all claimed).

XX XX New nucleic acid molecule encoding a human G-protein coupled receptor,
XX FT RAI3, useful for preventing, treating or ameliorating chronic obstructive
XX FT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
XX FT of COPD.
XX PS Claim 1; SEQ ID NO 2; 301pp; English.
XX CC The present sequence is that of cDNA encoding a human G-protein coupled
XX CC receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
XX CC Proteomic methods were used to isolate cigarette smoke-inducible
XX CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
XX CC identified as being tyrosine phosphorylated and/or as being
XX CC associated/complexed with tyrosine phosphorylated proteins only in those
XX CC cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
XX CC expressed in lung tissue, and since cigarette smoke is a major causative
XX CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
XX CC novel cellular target for identifying modulators, e.g. agonists or
XX CC antagonists, useful for the treatment and/or prevention of COPD and
XX CC related disorders such as emphysema and chronic bronchitis. RAI-3
XX CC modulators, e.g. agonists and antagonists, especially antisense
XX CC compounds, can be used to treat COPD and other disorders and diseases
XX CC associated with regulation of NF-kB and/or its associated or interacting
XX CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
XX CC the RAI-3 gene are useful for determining COPD association in
XX CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
XX CC preventing, treating or ameliorating disorders related to aberrant GPCR
XX CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
XX CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
XX CC disorders or conditions, autoimmune disorders, disorders related to
XX CC hyperimmune activity, inflammatory conditions, disorders related to
XX CC aberrant acute phase responses, hypercongenital conditions, birth
XX CC defects, necrotic lesions, wounds, organ transplant rejection, renal
XX CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
XX CC related to aberrant signal transduction, proliferation disorders,
XX CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
XX CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
XX CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
XX CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
XX CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
XX CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
XX CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
XX CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
XX CC regulation (all claimed).

New tumor-associated antigenic target polypeptides and nucleic acids,
PT useful in preparing a medicament for treating or detecting a
PT proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT prostate cancer or tumor.
XX
PS Claim 1; SEQ ID NO 3498; 7273pp; English.
XX
The invention relates to human tumour-associated antigenic target (TAT)
XX polypeptides, and their related nucleic acids. The TAT polypeptides are
XX overexpressed in cancer tissues compared to normal tissues, and may thus
XX serve as effective targets for the diagnosis and treatment of cancer in
XX mammals. The invention also relates to nucleic acid and polypeptide
XX sequences at least 80% identical to the TAT nucleic acids and
XX polypeptides; expression vectors and host cells comprising a TAT nucleic
XX acid; an antibody specific for a TAT polypeptide; a peptide or organic
XX molecule which binds to a TAT polypeptide; fusion proteins comprising a
XX TAT polypeptide; and methods and compositions for the treatment or
XX diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
XX antibodies, antagonists, binding molecules and compositions are useful
XX for diagnosing or treating a cell proliferative disorder associated with
XX increased TAT expression, particularly cancers such as breast cancer,
XX colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
XX cancer, pancreatic cancer, cervical cancer, cancers of the central
XX nervous system, melanoma and leukaemia. TAT nucleic acids may further be
XX used as hybridisation probes, in chromosome and gene mapping, in
XX chromosome identification and in gene therapy. The present sequence
XX represents a TAT nucleic acid of the invention

Diagnosing and treating a cancer, e.g. breast, lung, colon, or kidney
XX cancer, comprises detecting and blocking the over expression of a gene of
XX a protein found in breast, lung, colon, or kidney tissue.
XX
Claim 2; SEQ ID NO 2; 220pp; English.
XX
The present invention describes a method for diagnosing and treating a
XX cancer, e.g. breast, lung, colon, or kidney cancer. The method comprises
XX detecting and blocking the over expression of a gene of a protein found
XX in breast, lung, colon, or kidney tissue. Also described is an antibody
XX or binding portion of an antibody that specifically binds a protein found
XX in breast tissue, lung tissue, colon tissue, or kidney tissue. The
XX antibody has cytostatic activity, and can be used in gene therapy. The
XX methods, antibodies, polynucleotides and polypeptides from the present
XX invention are useful for detecting, diagnosing, preventing and treating
XX cancer, e.g. breast, lung, colon, or kidney cancer. The present sequence
XX represents a nucleotide sequence given in the present invention, which is
XX over expressed in human breast tumour tissue. N.B. All 395 sequences
XX referenced in this patent are detailed in the US provisional application
XX SN 60/447,900, filed 02/13/2003. In this application only one sequence,
XX representing the longest sequence of each of the 65 clones is listed in
XX Appendix A (and given as SEQ ID NO:1 to 65 in the Sequence Listing).

PT      New nucleic acid, and derived proteins, useful for diagnosis of bronchial
PT      cancer and in screening for therapeutic and diagnostic agents.
XX
PS      Claim 1; SEQ ID NO 350; 1381pp; German.
XX
CC      This invention relates to a novel isolated nucleic acid associated with
CC      bronchial cancer comprising 489 defined sequences given in the
CC      specification. The invention may be useful for the production of
CC      compounds with a cytostatic activity through the inhibition of expression
CC      or activity of tumour-associated proteins. The novel DNA sequences and
CC      the proteins/peptides encoded by them are used for detecting bronchial
CC      cancer or determining the risk of developing it and to screen for
CC      specific binding partners of the DNA or protein sequences, where the
CC      binding partners are potentially useful as agents for treating or
CC      diagnosing bronchial cancer. The DNA or protein sequences can also be
CC      used for prognosis, detection of metastases and for secondary treatment
CC      (of tumours that have been stabilised or are no longer detectable).
CC      Detecting abnormal expression of the DNA sequences provides early
CC      diagnosis of bronchial cancers. The present sequence is that of a novel
CC      bronchial cancer-associated human gene sequence of the invention.

PT	Novel isolated antibody e.g. anti-El6 or anti-TAT112 antibody that binds				
PT	to tumor-associated antigenic target polypeptide, useful for diagnosing				
PT	or treating cancer.				
XX					
PS	Claim 1; SEQ ID NO 40; 96pp; English.				
XX					
CC	This invention relates to a novel isolated antibody, for example anti-El6				
CC	or anti-TAT112 antibody, that binds to a tumor-associated antigenic				
CC	target polypeptide (TAT) and that lacks an associated signal peptide				
CC	sequence. The invention may be useful for the development of compounds				
CC	with a cytostatic activity acting as antagonists of the TAT188				
CC	polypeptide or RNA interference whilst the disclosed sequences may be				
CC	useful for gene therapy. The invention is useful for inducing the death				
CC	of a cell (such as a cancer cell chosen from breast, colon, rectum,				
CC	endometrium, kidney, lung, ovary, skin and liver) to which it binds,				
CC	inhibiting proliferation or promoting cell death of a cell expressing				
CC	TAT188. In addition, the invention may be useful for detecting the level				
CC	of TAT188 polypeptide in a test cell relative to a control cell, or				
CC	treating or preventing a cell proliferative disorder associated with				
CC	increased expression of TAT188. The novel antibody of the invention is				
CC	useful for inhibiting the growth of a cancer cell and may be useful for				
CC	diagnosing or treating cancer. The present sequence is that of the human				
CC	TAT115 cDNA which encodes a protein against which an antibody of the				
CC	invention may be targeted.

PT Substance that suppresses expression of retinoic acid-inducible G-protein
 PT coupled receptor-3 RAI3 gene or nucleic acid, useful for suppressing cell
 PT growth, and as pharmaceutical or therapeutic agent of breast cancer.

XX
 XX
 PS Claim 1; SEQ ID NO 2; 22pp; Japanese.

XX
 CC The invention relates to a novel substance which suppresses the
 CC expression of a retinoic acid-inducible G-protein coupled receptor (RAI)3
 CC gene. The RAI3 gene suppressing agent is useful for suppressing cell
 CC growth, and as a pharmaceutical or therapeutic agent of breast cancer,
 CC and is also useful in identifying a cell growth inhibitory substance. The
 CC RAI3 gene suppressing agent enables the identification of a cell growth
 CC inhibitory substance. This polynucleotide sequence represents the
 CC retinoic acid-inducible G-protein coupled receptor 3 gene of the
 CC invention.

XX Isolated nucleic acid molecules encoding novel ovarian polypeptides,
 PT useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian
 PT cancer), immune disorders, cardiovascular disorders and neurological
 PT diseases.

XX PS Claim 1; SEQ ID NO 834; 2922pp; English.

XX The invention relates to 2175 novel human ovarian antigens (ABP41054-

CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also
 CC encompasses polypeptides 90% identical and polynucleotides 95% identical
 CC to the sequences of the invention. The invention additionally relates to
 CC recombinant vectors and host cells comprising human ovarian antigen
 CC polynucleotides, antibodies against human ovarian antigens, and the use
 CC of ovarian antigen polynucleotides and polypeptides in diagnosing,
 CC treating, prognosing or preventing various ovary and/or breast-related
 CC disorders. Such conditions include ovarian cancer and breast cancer, and
 CC metastatic tumours of ovarian or breast origin, reproductive system
 CC disorders (e.g., infertility, disorders of pregnancy, anovulation,
 CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine
 CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic
 CC shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and
 CC vaginitis), immune disorders (e.g., congenital and acquired
 CC immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),
 CC blood-related disorders (e.g., anaemia), cardiovascular disorders,
 CC respiratory disorders, neurological disorders, gastrointestinal disorders
 CC and urinary system disorders. Ovarian antigen polypeptides and
 CC polynucleotides may also be used in screening for compounds which
 CC modulate ovarian antigen expression or activity. The polynucleotides may
 CC further be used for gene therapy, chromosome mapping, in the
 CC identification of individuals and in forensic analysis, and the
 CC polypeptides may be used as food additives or to prepare antibodies
 CC useful in disease diagnosis, drug targeting and phenotyping. The present
 CC sequence represents cDNA encoding a human ovarian antigen of the
 CC invention. Note: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New nucleic acid differentially expressed in pancreatic tumor tissue, for
XX use as diagnostic agents and in screening for therapeutic agents.

XX Claim 1; SEQ ID NO 42; 28pp; German.

CC The invention relates to a novel human nucleic acid sequence of the
CC pancreas and its encoded protein. The invention further comprises:
CC proteins and peptides, preferably isolated, that contain a sequence
CC encoded by the novel nucleic acid; and methods for diagnosis and
CC treatment of pancreatic cancer, using a substance that inhibits or binds
CC to the protein or its DNA, including: an antisense oligonucleotide, short
CC interfering RNA or ribozyme directed against the pancreatic protein, an
CC organic molecule, particularly having a molecular weight below 5000,
CC especially 300, that binds to the pancreatic DNA, an aptamer or
CC (monoclonal) antibody, preferably human or humanized, that binds to the
CC pancreatic DNA, or an anti-idiotypic antibody raised against the
CC monoclonal antibody, any of which may be derivatized with a reporter
CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel
CC human pancreatic proteins and their encoding DNA have cytostatic
CC activity. The novel sequences are useful for inhibiting transcription
CC and/or expression of genes and proteins associated with pancreatic
CC cancer. This polynucleotide sequence represents the DNA encoding one of
CC the novel human pancreatic proteins of the invention. Note: This sequence
CC is not shown in the specification, it has been electronically downloaded
CC from a DVD-ROM provided with this specification by the European Patent
CC Office.

PT New genomic sequences from Listeria species, useful for detection,
PT treatment and prevention of infection, also related polypeptides,
PT antibodies and modulators.
XX PS Claim 14; SEQ ID NO 3404; 180pp; French.
XX CC The present invention relates to nucleic acid sequences (ABQ67188-
XX CC ABQ711212) from Listeria sp. The sequences are useful as probes and
XX CC primers for identification and/or detection of Listeria (e.g. as
XX CC contaminants in foods, or mutational analysis) and for analysis of gene
XX CC expression. Proteins encoded by the nucleic acid sequences can be used to
XX CC screen for compounds that modulate gene expression, replication and
XX CC pathogenicity of Listeria (potential therapeutic agents), also for
XX CC treating infections by Listeria, and are useful as immunogens in anti-
XX CC Listeria vaccines. Note: The sequence data for this patent did not form
XX CC part of the printed specification, but was obtained in electronic format
XX CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. (Updated

 DR New serine protease (isolated from a member of the Micrococaceae) useful
 PT in e.g. cleaning composition and animal feed composition.
 XX Claim 53; SEQ ID NO 2; 333pp; English.
 XX The present invention relates to new isolated variant serine protease as
 CC given in SEQ ID NO:8 (I), obtained from a member of the Micrococaceae.
 CC Also claimed are compositions comprising an isolated serine protease
 CC having immunological cross-reactivity with the serine proteases obtained
 CC from a member of the Micrococaceae and particularly the protease
 CC obtained from Cellulomonas 69B4. The variant has improved stability as
 CC compared to wild-type Cellulomonas 69B4 protease. The protease is
 CC obtained from Cellulomonas, Oerskovia, Cellulosimicrobium,
 CC Xylanthacterium or from Micromonospora (preferably Cellulomonas 69B4). The
 CC variant serine protease comprises at least one substitution corresponding
 CC to the amino acid positions in SEQ ID NO. 8, and where the variant
 CC protease has better performance in at least one property of keratin
 CC hydrolysis, thermostability, casein activity, LAS stability or cleaning,
 CC as compared to wild-type Cellulomonas 69B4 protease. The invention deals
 CC with serine proteases, genetic material encoding the proteases,
 CC proteolytic proteins obtained from Micrococaceae spp, variant proteins
 CC developed from them, vectors comprising the DNA encoding the protease,
 CC host cells transformed with the vector DNA and enzymes produced by the
 CC host cells. (I) is useful in cleaning compositions and animal feed
 CC compositions, and is useful in laundry and dish detergents. It is useful
 CC in textile and leather processing compositions. The isolated
 CC polynucleotide of (I) provides the capability of isolating further
 CC polynucleotides, which encode proteins having serine protease activity.
 CC The enzyme compositions have comparable or improved wash performance, as
 CC compared to presently used subtilisin proteases. The present sequence is
 CC DNA encoding the signal peptide that is operatively linked to the
 CC precursor protease of serine protease, SEQ ID NO:2.

XX
XX Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
XX Example 2; SEQ ID NO 7430; 210pp; English.
XX
XX The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytosstatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

PT Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.
XX Claim 1; SEQ ID NO 1042; 2686pp; English.
XX
XX This invention relates to novel, isolated full length human cDNA
CC molecules and the encoded proteins thereof. Specifically, it refers to
CC cDNA clones obtained by an oligo-capping method, where none of these
CC clones are identical to any known human mRNAs. The present invention
CC describes an immunoassay to identify agonists and antagonists, as well as
CC antibodies, antisense molecules and siRNAs that can all be used to bind
CC to and modulate expression of the cDNA molecules. As such, these
CC molecules are useful for diagnostic markers or therapeutic targets for
CC the various diseases or morbid states. In particular, they are useful in
CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC disease, Parkinson's disease, dementia, short memory and various cancers,
CC as well as for maintaining equilibrium of sense or motor function, and
CC for treating emotional reaction, fear response and panic. Accordingly,
CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC cytosstatic and tranquiliser activities. This polynucleotide is a full
CC length human cDNA sequence of the invention. NOTE: This sequence is not
CC given in the sequence listing of the specification but can be obtained on
CC CD-ROM from the European Patent Office, Vienna Sub-office.

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-541565/60.
XX
XX Nucleic acids encoding 3224 human nervous system antigen polypeptides,
XX useful for preventing, diagnosing and/or treating nervous system cancers
XX and metastases.
XX
XX Disclosure; SEQ ID NO 13473; 1701pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AB11004-ABA21534) and proteins
XX (AB114678-AB18001) useful for preventing, treating or ameliorating
XX medical conditions e.g. by protein or gene therapy. The genes are
XX isolated from a range of human tissues disclosed in the specification.
XX The nucleic acids, proteins, antibodies and (ant)agonists are useful in
XX the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
XX ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
XX breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
XX disorders e.g. Addison's disease, allergies, autoimmune haemolytic
XX anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
XX multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
XX cardiovascular disorders such as myocardial ischaemia; (d) wound healing
XX ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
XX infectious diseases such as viral, bacterial, fungal and parasitic
XX infections. Note: The sequence data for this patent did not form part of
XX the printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pat_sequences

XX Novel human cancer associated protein encoded within open reading frame
PT of cancer associated gene, useful as targets for diagnosing cancer.

XX PS Disclosure; SEQ ID NO 557; 182pp; English.

XX The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents a murine CA gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX PT Novel polynucleotide comprising Bifidobacterium genome sequence useful as
a probe or primer for detecting and/or identifying Bifidobacterium longum
in a biological sample.

XX PS Disclosure; SEQ ID NO 1102; 80pp; English.

XX CC The present invention describes a polynucleotide (I) comprising a
sequence of a Bifidobacterium genome selected from the nucleotide
sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at
least 90% identity or which hybridises with the sequences given in
ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a
fusion protein, comprising a sequence selected from 1097 sequences given
in ABP65258 to ABP63354 ligated in frame to a polynucleotide encoding a
heterologous polypeptide. (I) has antidiarrheic and antibacterial
activities, and can be used as an inhibitor of Salmonella. (I) (which is
a probe) is useful for the detection and/or identification of
CC Bifidobacterium longum in a biological sample. A carrier containing the
lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be

used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based products, ice-creams, fermented cereal based products, milk based powders, infant formula, pet food or a pharmaceutical composition selected from tablets, liquid bacterial suspensions, dried oral supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent Bifidobacterium related nucleotide sequences given in the Sequence Listing from the present invention but not mentioned further within the specification. N.B. Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer.

Claim 1; Page 11075; 11750pp; English.

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing

CC the efficacy of a therapy for inhibiting prostate cancer in a patient;
 CC (e) selecting a composition for inhibiting prostate cancer in a patient;
 CC (f) assessing the prostate cell carcinogenic potential of a compound; (g)
 CC determining whether prostate cancer has metastasized in a patient; (h)
 CC assessing the aggressiveness or indolence of prostate cancer in a patient
 CC ; (I) is also useful as a pharmacodynamic or pharmacogenomic marker

 PT New recombinant DNA constructs useful in the field of biochemistry and
 PT genetics, and in particular for producing transgenic plants with improved
 PT biological characteristics.
 XX
 PS Claim 1; SEQ ID NO 4894; 14pp; English.
 XX
 CC The invention relates a recombinant DNA construct comprising a
 CC polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
 CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
 CC (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
 CC Arabidopsis, wheat and rape but the specification does not indicate which
 CC sequences is derived from which organism. Also included is a method of
 CC producing a plant having an improved property, comprising transforming a
 CC plant with a recombinant DNA construct comprising a promoter region
 CC functional in a plant cell operably joined to a polynucleotide encoding a
 CC polypeptide associated with the property, and growing the transformed
 CC plant. The property is selected from improving plant cold tolerance, for
 CC manipulating growth rate in plant cells by modification of the cell cycle
 CC pathway, for improving plant drought tolerance, for providing increased
 CC resistance to plant disease, for galactomannan production, for production
 CC of plant growth regulators, for improving plant heat tolerance, for

CC improving plant tolerance to herbicides, for increasing the rate of
 CC homologous recombination in plants, for lignin production, for improving
 CC plant tolerance to extreme osmotic conditions, for improving plant
 CC tolerance to pathogens or pests, for yield improvement by modification of
 CC photosynthesis, for modifying seed oil yield and/or content, for
 CC modifying seed protein yield and/or content, for yield improvement by
 CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake
 CC and for yield improvement by providing improved plant growth and
 CC development under at least one stress condition. The polynucleotide may
 CC also encode a plant transcription factor. The methods and compositions of
 CC the present invention are useful in the field of biochemistry and
 CC genetics, in particular for producing transgenic plants with improved
 CC biological characteristics such as increased yield, improved nitrogen
 CC flow, increasing plant tolerance to cold or heat, improving plant
 CC tolerance to extreme osmotic and drought conditions, and improving plant
 CC tolerance to plant pests or pathogens. They can also be used in physical
 CC arrays of molecules, plant breeding markers, computer-based storage and
 CC analysis systems. The present sequence is one of the 5544 plant cDNA
 CC sequences of the invention. Note: The sequence data for this patent did
 CC not form part of the printed specification, but was obtained in
 CC electronic format directly from USPTO at
 CC seqdata.uspto.gov/sequence.html?docID=20040216190.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
XX length cDNAs defined in the specification, and for the detection and/or
XX diagnosis of the abnormality of the proteins encoded by the full-length
XX cDNAs.

XX Claim 3; SEQ ID NO 6623; 2537pp + Sequence Listing; English.

XX The present invention describes primer sets for synthesizing 5602 full-
XX length cDNAs defined in the specification. Where a primer set comprises:
XX (a) an oligo-dT primer and an oligonucleotide complementary to the
XX complementary strand of a polynucleotide which comprises one of the 5602
XX nucleotide sequences defined in the specification, where the
XX oligonucleotide comprises at least 15 nucleotides; or (b) a combination
XX of an oligonucleotide comprising a sequence complementary to the
XX complementary strand of a polynucleotide which comprises a 5'-end
XX sequence and an oligonucleotide comprising a sequence complementary to a
XX polynucleotide which comprises a 3'-end sequence, where the
XX oligonucleotide comprises at least 15 nucleotides and the combination of
XX the 5'-end sequence/3'-end sequence is selected from those defined in the
XX specification. The primer sets can be used in antisense therapy and in
XX gene therapy. The primers are useful for synthesizing polynucleotides,

CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

XX
XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
XX
PS Claim 1; SEQ ID NO 5189; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesizing 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

XX Identifying D and ND pathotypes of Verticillium dahliae, useful for early diagnosis of infection in olives and cotton, by nested polymerase chain reaction.
XX
PS Disclosure; Fig 2; 68pp; Spanish.
XX
XX The invention relates to a novel method for identifying defoliating and/or non-defoliating pathogenic types of Verticillium dahliae in a sample of plant material by use of a nested polymerase chain reaction. The method is used to differentiate between the pathotypes of V. dahliae of olives and cotton, e.g. to establish certification of disease-free plants, and also to study the epidemiology and control of V. dahliae. This polynucleotide sequence represents the DNA of a Verticillium dahliae defoliating plant of the invention

 DR New Helicobacter aliphatic amidase AmIE polypeptides and their encoding
 PT sequences - used in diagnosis, treatment and prevention of Helicobacter
 PT sp. infections in humans and animals.
 XX Claim 2; Fig 4b; 51pp; English.
 PS The present sequence represents the Helicobacter pylori DNA insert full
 CC restriction map of plasmid pILL405. The present invention describes H.
 CC pylori aliphatic amidase AmIE. AmIE polypeptides and antibodies form
 CC immunogenic, pharmaceutical and therapeutic compositions which can be
 CC used in methods for detecting, treating or preventing Helicobacter sp.
 CC (particularly H. pylori and H. heilmannii) infections, especially chronic
 CC gastroduodenal disorders like gastritis, dyspepsia and peptic ulcers in
 CC man, and porcine gastric ulcers in pigs. They are administered in
 CC immunologically/pharmacologically effective amounts by an oral,
 CC intradermal, intramuscular, intravenous or mucosal route to a patient. A
 CC detection kit for a Helicobacter infection comprises any AmIE
 CC polynucleotides with any of the vectors given in the present invention.
 CC The polypeptides are used to in a process to degrade acrylamide,
 CC acetamide, propionamide and isobutyramide. The polypeptides are also used
 CC to screen for active substrates that inhibit Helicobacter sp. amidase
 CC activity. The polynucleotides encoding the aliphatic amidase AmIE
 CC polypeptides are the first to be characterized at the molecular level.
 CC Methods involving such polypeptides are preferred to urease-based methods
 CC because of the presence of urea positive bacteria in porcine
 CC gastrointestinal tracts

 DR Novel nucleic acids and polypeptides for diagnosis, treatment of central
 XX and peripheral nervous system diseases and neuropathies, such as
 PT Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
 PT lateral sclerosis.
 XX Example 2; SEQ ID NO 730; 300pp; English.
 PS The present invention relates to the isolation of novel human
 CC polynucleotide sequences and their encoding polypeptides. The novel
 CC polypeptides exhibit activities relating to angiogenesis, cytokine, cell
 CC proliferation, cell differentiation, antiinflammatory, and stem cell
 CC growth factor activities. The polypeptides are involved in the
 CC proliferation, differentiation and survival of pluripotent and totipotent
 CC stem cells, and are useful for re-engineering damaged or diseased
 CC tissues, transplantation, manufacture of bio-pharmaceuticals and
 CC development of bio-sensors. The polypeptides can be used to manipulate
 CC stem cells in culture to give rise to neuroepithelial cells that can be
 CC used to augment or replace cells damaged by illness, autoimmune disease,
 CC accidental damage or genetic disorders. The polypeptides induce the
 CC proliferation of neural cells and regeneration of nerve and brain tissue
 CC and are useful for the treatment of central and peripheral nervous system
 CC diseases and neuropathies, such as Alzheimer's, Parkinson's disease,
 CC Huntington's disease, amyotrophic lateral sclerosis (ALS). The
 CC polypeptides are also involved in chemotactic or chemokinetic activity,
 CC regulation of haematopoiesis and are useful for treating myeloid or
 CC lymphoid cell disorders, platelet disorders such as thrombocytopaenia and
 CC for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue
 CC growth. In tissue repair, healing of burns, incisions, ulcers, for
 CC treating osteoporosis, osteoarthritis, bone degenerative disorders, and
 CC periodontal disease. The polypeptides are also useful for gut protection
 CC or regeneration and treatment of lung or liver fibrosis, reperfusion
 CC injury in various tissues, various immune deficiencies and disorders
 CC including severe combined immunodeficiency (SCID), bacterial or fungal
 CC infections, autoimmune disorders (e.g. multiple sclerosis, rheumatoid

CC arthritis, diabetes mellitus, myasthenia gravis), allergic reactions and
 CC conditions, such as asthma or other respiratory problems. The
 CC polypeptides are involved in thrombolysis or thrombosis and are useful in
 CC treatment of various coagulation disorders (including hereditary
 CC disorders such as haemophilia) or to enhance coagulation and other
 CC haemostatic events in treating wounds resulting from trauma, surgery or
 CC other causes. The polypeptides exhibit immune stimulating or immune
 CC suppressing activity, and are useful for treating autoimmune diseases or
 CC cancer. They also inhibit the growth, infection or function of infectious
 CC agents such as bacteria, fungi, viruses, effect biorhythms or circadian
 CC cycles of rhythms, fertility of male or female subjects, metabolism,
 CC catabolism, and anabolism. ACD05827-ACD06027 represent novel contigs
 CC assembled using expressed sequence tag (EST) sequences as seeds. Note:
 CC The sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

XX New gene expression profile generated from primary, endothelial,
 PT epithelial, and muscle cell types, useful for identifying disease
 PT pathologies involving alterations of gene expression, e.g. cancer.

XX Disclosure; Page 617-618; 850pp; English.

XX The invention relates to a gene expression profile comprising one or more
 CC genes (ABZ34889-ABZ35692) and generated from a cell type. The cell type
 CC is a coronary artery endothelium, umbilical artery or vein endothelium,
 CC aortic endothelium, dermal microvascular endothelium, pulmonary artery
 CC endothelium, myometrium microvascular endothelium, keratinocyte
 CC epithelium, bronchial epithelium, mammary epithelium, prostate
 CC epithelium, renal cortical epithelium, renal proximal tubule epithelium,
 CC small airway epithelium, renal epithelium, umbilical artery smooth
 CC muscle, neonatal dermal fibroblast, pulmonary artery smooth muscle,
 CC dermal fibroblast, neural progenitor cells, skeletal muscle, astrocytes,
 CC aortic smooth muscle, mesangial cells, coronary artery smooth muscle,
 CC bronchial smooth muscle, uterine smooth muscle, lung fibroblast,

CC osteoblasts or prostate stromal cell. The gene expression profile is used
CC for determining the level of RNA expression for a sample, determining the
CC phenotype of a cell and distinguishing cell types. The gene or a protein
CC expression profile is useful in identifying disease pathologies involving
CC alterations of gene expression. The assessment of expression profiles may
CC provide meaningful information with respect to tumour type and stage,
CC treatment methods, and prognosis. The gene or protein expression profile
CC may also be used for creating microarrays. The microarray is useful for
CC genetic and physical mapping of genomes, DNA sequencing, genetic or
CC medical diagnosis, genotyping of organisms, confirming cell or tissue
CC antifungal agents

XX New tumor-associated antigenic target polypeptides and nucleic acids,
PT useful in preparing a medicament for treating or detecting a
PT proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT prostate cancer or tumor.

XX Claim 1; SEQ ID NO 4752; 7273pp; English.

XX The invention relates to human tumour-associated antigenic target (TAT)
CC polypeptides, and their related nucleic acids. The TAT polypeptides are
CC overexpressed in cancer tissues compared to normal tissues, and may thus
CC serve as effective targets for the diagnosis and treatment of cancer in
CC mammals. The invention also relates to nucleic acid and polypeptide
CC sequences at least 80% identical to the TAT nucleic acids and
CC polypeptides; expression vectors and host cells comprising a TAT nucleic

CC acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC TAT polypeptide; and methods and compositions for the treatment or
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC antibodies, antagonists, binding molecules and compositions are useful
CC for diagnosing or treating a cell proliferative disorder associated with
CC increased TAT expression, particularly cancers such as breast cancer,
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC cancer, pancreatic cancer, cervical cancer, cancers of the central
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC used as hybridisation probes, in chromosome and gene mapping, in
CC chromosome identification and in gene therapy. The present sequence
CC represents a TAT nucleic acid of the invention

XX Novel isolated human peptide useful for treating disorders characterized by the absence of, inappropriate or unwanted expression of the receptor protein, and as immunogens to raise antibodies.

PS Claim 4; Fig 3; 88pp; English.

XX The invention relates to an isolated human peptide (S1) comprising an Na/C1-dependent organic solute cotransporter family member, an allelic variant or orthologue of (S1) encoded by a polynucleotide hybridising under stringent conditions to the opposite strand of a sequence appearing as ABK89218 and ABK92239, or a fragment of (S1) with at least 10 contiguous amino acids. A pharmaceutical composition comprising a modulator of S1 is useful for treating a disease or condition mediated by a human protease. S1 and its encoding nucleic acid are useful as models for the development of human therapeutics, for identifying therapeutic proteins, as targets for development of human therapeutic agents. S1 is useful to raise antibodies or to elicit another immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as markers for tissues in which the corresponding protein is preferentially expressed, in drug screening assays, in cell-based or cell-free systems, to identify compounds that modulate cotransporter activity of the protein in its natural state, or an altered form that causes the specific disease or pathology associated

CC with the receptor (e.g. neuron tumour), as bait proteins in a two-hybrid or three-hybrid assay, to provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, in pharmacogenomic analysis, and for treating a disorder characterised by an absence of, in appropriate or unwanted expression of S1. An anti-S1 antibody is useful for isolating and purifying S1, to detect S1 in cells or tissues, in situ, in vitro or in a cell lysate or supernatant, to assess abnormal tissue distribution or abnormal expression during development or progression of a biological condition, and for inhibiting a protein function. S1 nucleic acids are useful as probes, primers, and chemical intermediates, in biological assays, for constructing recombinant vectors, host cells and transgenic animals, for expressing antigenic portions of the S1 proteins, or for designing ribozymes. A vector comprising the S1 nucleic acid is useful for producing an S1 protein or peptide, for conducting cell-based assays involving the protein or its fragment, for identifying protein mutants whose functions are affected, and to produce non-human transgenic animals. The gene for the cotransporter is located on chromosome 5. The present sequence genomic DNA for the cotransporter protein

 XX Isolated proteins or peptides that are expression products of genes
 PT derived from microorganisms producing aminoglycoside antibiotics.
 PT
 XX Example 1; Page 185-199; 367pp; German.
 PS
 XX This invention describes novel isolated proteins or peptides that are
 CC expression products of genes derived from aminoglycoside-producing
 CC microorganisms. The proteins or peptides are functional for a step in the
 CC biosynthesis of aminoglycoside antibiotics, especially butirosin,
 CC gentamicin, neomycin, fortimicin, tobramycin, apramycin, paromomycin,
 CC hygromycin B, ribostamycin, sisomicin, kanamycin, nebramycin,
 CC sel domycin, destomycin, istamycin, sannamycin, dactimicin, sporaricin,
 CC blusomycin, ashimycin, lividomycin and spectinomycin. The invention
 CC also describes a) isolated nucleic acids encoding the proteins or
 CC peptides which are under the control of a regulatory sequence, especially
 CC a promoter; b) transformation vectors containing the nucleic acids; c)
 CC cells containing the nucleic acids and/or the proteins or peptides; d) a
 CC method of producing the cells by transforming cells with vectors as above
 CC ; e) aminoglycosides produced by culturing the cells; f) producing
 CC aminoglycosides by culturing cells as above and isolating aminoglycosides
 CC from the cells and/or culture supernatant and g) pharmaceutical
 CC compositions containing the aminoglycosides. The aminoglycosides are
 CC useful for treating bacterial or viral infections, especially infections
 CC with Gram-positive or -negative bacteria, e.g. *Escherichia coli* or
 CC *Klebsiella*. This sequence encodes proteins (AED48605-AED48653) from
 CC *Streptomyces rimosus* (DBJ reference AJ628955) involved in the synthesis
 CC of paromomycin.

 XX Claim 88; Page 656-669; 673pp; English.
 PS
 XX Sequences AAH51110-AAH51593 represent human DNA fragments which contain
 CC biallelic markers. The sequences are related to various human genes
 CC including microsomal glutathione S-transferase II (MGSTII), malate
 CC decarboxylase enzyme (DMEI/MEI), cytochrome P450, glutathione
 CC reductase/synthase (GSHR/GSHS), flavin-containing monooxygenases (FMO),
 CC gamma-glutamyltransferase 5 (GGT5), dipeptidase (DP), glucose 6-phosphate
 CC dehydrogenase (G6PDH), phosphogluconate dehydrogenase (PGDH), and uridine
 CC diphosphate glucuronosyl transferases (UGT2). Each of these sequences
 CC contains a biallelic marker/polymorphism, which is represented in the
 CC sequence as a degenerate/undefined base. The genes to which the biallelic
 CC marker containing sequences are related are involved in drug metabolism.
 CC Sequences AAH51594 - AAH51598 represent the genomic sequence of the
 CC MGSTII gene and four alternative MGSTII cDNA sequences. AAB62905-AAB62906
 CC are MGSTII gene products. PCR primers AAH51599 and AAH51600 are used in
 CC an example for the amplification of human genomic DNA fragments. The
 CC invention includes a method of genotyping comprising determining the
 CC identity of a nucleotide at a DME- or MGSTII-related biallelic marker in
 CC a biological sample. The method is used to determine the frequency in
 CC a population of an allele of a DME- or MGST-II related biallelic marker and
 CC to select an individual for inclusion in a clinical trial of a drug
 CC treatment. The method is also used to detect association between allele
 CC and phenotype, and to detect association between haplotype and phenotype.
 CC The polynucleotides are used, in hybridization assays, sequencing assays
 CC or allele specific amplification assays. The method can be used to
 CC determine whether an individual suffers or is at risk of developing
 CC asthma or is at risk of developing hepatotoxicity on treatment with
 CC zileuton

XX
XX Method for disrupting targeted gene in genome of organism particularly
XX thermotable bacterium and with genome chips for analysis, applicable in
XX studying gene structure and functions.
XX
XX Example 1; SEQ ID NO 1838; 598pp; Japanese.
XX
XX This invention relates to a novel method for targeting disruption of an
XX arbitrary gene in a genome of an organism which comprises providing the
XX whole sequential data of the genome of such organism, selecting at least
XX 1 arbitrary region in the sequence, providing a vector that contains a
XX sequence homologous with the selected region and a marker gene,
XX transformation, and homologous recombination. The genome is preferably
XX the genome of a hyperthermostable archaeobacterium, particularly
XX Thermococcus kodakaraensis KOD1. The method is for targeting the
XX disruption of a gene in the genome of an organism, which is applicable in
XX studying gene structure and functions as well as enzyme activities of
XX encoded proteins and useful in medicine, forensic science, food or drug
XX inspection, molecular biology and immunology. With this method, the
XX disruption of a gene at an arbitrary position in a genome can be achieved
XX efficiently and reliably. The present position is that of the genomic DNA
XX sequence of Thermococcus kodakaraensis (KOD1) which was derived during
XX use of the method of the invention. Note: The sequence data for this
XX patent did not form part of the printed specification, but was obtained
XX in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX New isolated cancer-associated polynucleotides and polypeptides useful
XX for diagnosing, preventing or treating cancers, especially lymphoma and
XX leukemia, or in screening for agents that modulate cancer.
XX
XX claim 16; seqid 506; 310pp; English.
XX
XX The invention relates to an isolated nucleic acid comprising at least 10
XX contiguous nucleotides of any of the 233 polynucleotide sequences given
XX in the specification, or its complement. The nucleic acids encode cancer-
XX associated proteins. Also included are an expression vector comprising
XX the isolated nucleic acid cited above, a host cell comprising the above
XX recombinant nucleic acid or expression vector, a microarray for detecting
XX a cancer-associated (CA) nucleic acid comprising at least one probe
XX comprising at least 10 contiguous nucleotides of any of the above-
XX mentioned nucleotide sequences, an isolated polypeptide (encoded within
XX an open reading frame of a CA sequence selected from any of the 95
XX polynucleotide sequences as mentioned in the specification, or its
XX complement), an isolated antibody, (or its antigen binding fragment) that
XX binds to the above polypeptide, a hybridoma that produces the above
XX monoclonal antibody, a pharmaceutical composition comprising the above
XX antibody and a pharmaceutical excipient, a kit for detecting cancer
XX cells (comprising the antibody cited above, methods for diagnosing cancer
XX or for detecting the presence or absence of cancer cells in an
XX individual, a method for inhibiting a growth of cancer cells in an
XX individual, a method for delivering a therapeutic agent to cancer cells
XX in an individual, an electronic library comprising the above
XX polynucleotide or polypeptide (or their fragments), methods of screening
XX for anticancer activity or for a bioactive agent capable of modulating
XX the activity of a CA protein (CAP), methods for detecting cancer
XX associated with expression of a polypeptide in a test cell sample, a
XX method for treating cancers and a method for inhibiting the expression of
XX CA gene in a cell. The composition and methods are useful for detecting,
XX diagnosing, preventing and treating cancers, especially lymphoma and
XX leukaemia. These may also be used in screening for agents that modulate
```

CC The present invention describes substantially purified human proteins
 CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1
 CC in the specification). ABN15762 to ABN27252 encode the human ORFX
 CC proteins given in ABP0010 to ABP1500. ORFX proteins are useful for
 CC treating or preventing a pathology associated with an ORFX-associated
 CC disorder in humans, and in the manufacture of a medicament for treating a
 CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide
 CC sequences can be used in gene therapy. ORFX sequences can be used in the
 CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
 CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,
 CC osteoarthritis, neurodegenerative disorders, disorders related to organ
 CC transplantation, cardiovascular diseases, diabetes mellitus, systemic
 CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester
 CC storage disease, various immune deficiencies and disorders, infectious

CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid
 CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
 CC disease and autoimmune inflammatory eye disease. ORFX proteins are also
 CC useful for treating burns, incisions, ulcers, for treating osteoporosis,
 CC bone degenerative disorders, or periodontal disease, and for gut
 CC protection or regeneration and treatment of lung or liver fibrosis,
 CC reperfusion injury in various tissues and conditions resulting from
 CC systemic cytokine damage. N.B. The sequence data for this patent did not
 CC form part of the printed specification, but was obtained in electronic
 CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

 XX New polynucleotide sequences obtained from various cDNA libraries, useful
 XX as hybridization probes, as oligomers for PCR, for chromosome and gene
 XX mapping, in the recombinant production of protein, or in generating
 XX antisense DNA or RNA.
 XX PS Claim 1; SEQ ID NO 28686; 44pp; English.
 XX The invention relates to an isolated polynucleotide comprising any one of
 CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
 CC determined by the technique of SBH (sequencing by hybridisation). Also
 CC included is a purified polypeptide comprising a sequence corresponding to
 CC a reading frame of the novel polynucleotide. The nucleic acid sequences
 CC are useful in diagnostics as expressed sequence tags (EST) for
 CC identifying expressed genes or for physical mapping of the human genome,
 CC in forensics, in assessing biodiversity, or in identifying mutations
 CC responsible for genetic disorders and other traits. The nucleotide
 CC sequences are also useful as hybridisation probes, as oligomers for PCR,
 CC for chromosome and gene mapping, in the recombinant production of

CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The present sequence
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030073623

XX
CC The invention relates to nucleic acids (ADN12486-ADN13970) isolated from
CC human prostate, colon, lung and breast cancer cDNA libraries, and to 57
CC proteins (ADN13971-ADN14027) encoded by a subset of these cDNA sequences
CC (ADN13914-ADN13970). The invention also relates to vectors and host cells
CC comprising a nucleic acid of the invention; a method for the recombinant
CC production of a protein of the invention; an antibody specific for a
CC protein of the invention; a polynucleotide library comprising at least
CC one nucleic acid sequence of the invention; a method for detecting a
CC cancerous cell by PCR or probe hybridization; inhibiting a cancerous
CC phenotype (particularly aberrant proliferation) of a cell; a method of
CC identifying an agent that modulates the biological activity of a gene
CC product differentially expressed in a cancerous cell compared with a
CC normal cell; and a method of treating a cancer patient using the agent
CC identified. The nucleic acids and polypeptides can be used to diagnose,
CC prognosis, treat or prevent cancers such as prostate, colon, lung or
CC breast cancer, and can also be used to screen for drugs for the treatment
CC of cancer. The nucleic acids can also be used for gene mapping, tissue

CC typing and tissue profiling. The present sequence represents a
CC specifically claimed cancer-related cDNA of the invention. Note: The

CC      The present invention describes a polynucleotide (I) comprising a
CC      sequence of a Bifidobacterium genome selected from the nucleotide
CC      sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at
CC      least 90% identity or which hybridises with the sequences given in
CC      ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a
CC      fusion protein, comprising a sequence selected from 1097 sequences given
CC      in ABP65258 to ABP63354 ligated in frame to a polynucleotide encoding a
CC      heterologous polypeptide. (I) has antidiarrheic and antibacterial
CC      activities, and can be used as an inhibitor of Salmonella. (I) (which is
CC      a probe) is useful for the detection and/or identification of
CC      Bifidobacterium longum in a biological sample. A carrier containing the
CC      lactic acid bacterium Bifidobacterium longum NCC2705 (NCIM 1-2618) can be
CC      used for preventing and/or treating diarrhoea brought about by pathogenic
CC      bacteria and/or rotavirus. The carrier is a food composition selected
CC      from milk, yogurt, curd, cheese, fermented milks, milk based fermented
CC      products, ice-creams, fermented cereal based products, milk based
CC      powders, infant formula, pet food or a pharmaceutical composition
CC      selected from tablets, liquid bacterial suspensions, dried oral
CC      supplement, wet oral supplement, dry tube feeding or wet tube feeding.
CC      (I) is useful in DNA arrays or chips to carry out analysis of the
CC      expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent
CC      Bifidobacterium related nucleotide sequences given in the Sequence
CC      Listing from the present invention but not mentioned further within the
CC      specification. N.B. The sequence data for this patent is not represented

XX Novel purified corn-ear derived polynucleotide useful as hybridization
XX probe for detecting polynucleotide in sample, and for identifying,
XX evaluating, and altering desired characteristics associated with growth,
XX development.
XX Example; SEQ ID NO 2571; 390pp; English.
XX The present invention relates to the isolation of corn ear-derived
XX polynucleotides (cdps) from the corn (Zea mays) cDNA libraries SATMON022
XX and SATMON023. Some of the cdps uniquely identify structural, functional,
XX and regulatory genes of corn ear. The polynucleotide sequences are
XX useful for detecting cdps in a sample, for producing a corn ear-specific
XX profile of gene transcription, for detecting altered gene expression in
XX inbred or hybrid plants, and for screening several molecules for specific
XX binding to the polynucleotide. The cdps are useful to identify, isolate,
XX or extend identical or related corn-ear nucleic acid sequences from DNA
XX libraries, and in nucleic acid amplification or hybridisation techniques
XX to follow the expression of desirable traits through plant breeding
XX programs. Preferably, the cdps are used to identify, evaluate, alter, or
XX follow the inheritance of desired characteristics associated with growth
XX and development, disease resistance, environmental adaptability, quality,
XX and yield of corn. The cdps are also useful as molecular markers for
XX studying inheritance and multigene traits in a plant breeding program.
XX The cdps are useful for producing purified corn-ear polypeptides by
XX recombinant techniques. They are also useful in diagnostic assays to
XX detect or confirm conditions or diseases associated with abnormal levels
XX of cdp expression. ABX81541-ABX89140 represent corn ear-derived

CC polynucleotides (cpds) of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from the USPTO web site at

XX PT New substantially purified nucleic acid molecule that encodes a cotton
PT protein or its fragment, useful as molecular tool for the targeting and
PT isolation of novel genes for plant protection and improvement.

XX PS Claim 1; SEQ ID NO 4248; 30pp; English.

XX CC The invention relates to a substantially purified nucleic acid molecule
CC that encodes a cotton protein or its fragment comprising an EST
CC (expressed sequence tag) appearing as ADP9990-ADP95919. Also included
CC are a substantially purified cotton protein or its fragment encoded by a
CC nucleic acid molecule above and a transformed plant (having a nucleic
CC acid molecule which comprises: an exogenous promoter region which
CC functions in a plant cell to cause the production of a mRNA molecule; a
CC structural nucleic acid molecule comprising one of the ESTs or their
CC complements; a 3' non-translated sequence that functions in the plant
CC cell to cause termination of transcription and addition of polyadenylated
CC ribonucleotides to a 3' end of the mRNA molecule). The ESTs are useful as
CC molecular tool for the targeting and isolation of novel genes for plant
CC protection and improvement. The ESTs are useful for developing new
CC strategies for understanding critical plant developmental and metabolic
CC pathways, for isolating genes and promoters, for identifying and mapping
CC the genes involved in developmental and metabolic pathways, and for
CC determining gene function. The cotton nucleic acid molecules are useful
CC as molecular tags to isolate genetic regions, isolate genes, map genes,
CC and determine gene function. The nucleic acid molecules are useful for
CC determining if genes are members of a particular gene family and for use
CC in marker-assisted breeding programs. The present sequence is one of the
CC 4930 cotton ESTs of the invention. NOTE: The sequences are not displayed

CC in the specification but are available in electronic format from the
CC USPTO at seqdata.uspto.gov/sequence.html?DocID=20040123338.

XX PT Novel purified corn-ear derived polynucleotide useful as hybridization
PT probe for detecting polynucleotide in sample, and for identifying,
PT evaluating, and altering desired characteristics associated with growth,
PT development.

XX PS Example; SEQ ID NO 5109; 390pp; English.

XX CC The present invention relates to the isolation of corn ear-derived
CC polynucleotides (cdps) from the corn (Zea mays) cDNA libraries SATMON022
CC and SATMON023. Some of the cdps uniquely identify structural, functional,
CC and regulatory genes of corn ear. The polynucleotide sequences are
CC useful for detecting cdps in a sample, for producing a corn ear-specific
CC profile of gene transcription, for detecting altered gene expression in
CC inbred or hybrid plants, and for screening several molecules for specific
CC binding to the polynucleotide. The cdps are useful to identify, isolate,
CC or extend identical or related corn-ear nucleic acid sequences from DNA
CC libraries, and in nucleic acid amplification or hybridisation techniques
CC to follow the expression of desirable traits through plant breeding
CC programs. Preferably, the cdps are used to identify, evaluate, alter, or
CC follow the inheritance of desired characteristics associated with growth
CC and development, disease resistance, environmental adaptability, quality,
CC and yield of corn. The cdps are also useful as molecular markers for
CC studying inheritance and multigene traits in a plant breeding program.
CC The cdps are useful for producing purified corn-ear polypeptides by
CC recombinant techniques. They are also useful in diagnostic assays to

CC detect or confirm conditions or diseases associated with abnormal levels
 CC of cdp expression. ABX81541-ABX89140 represent corn ear-derived
 CC polynucleotides (cpds) of the invention. Note: The sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from the USPTO web site at
 CC seqdata.uspto.gov/psipdIDEntry.html

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: Eye; Vector: pCMVSPORT6; A human iris
library (bx) was normalized by self-subtraction. One
portion of double stranded plasmid DNA representing the
library was linearized by NotI. This NotI digested library

was used as a template for biotinylated RNA synthesis using SP6 RNA polymerase. Another portion of the double stranded plasmid library was converted to single-stranded circles in vitro using Gene II and Exonuclease III (Life Technologies). Single-stranded DNA (1 mg) was hybridized (Cot 500) with 41 mg of Bio-RNA and vector blocking oligonucleotides. The hybridized Bio-RNA/ss-circles were removed by streptavidin:phenol extraction. EST analysis was performed on the library at the NIH Intramural Sequencing Center (NISC)."

/note="Organ: Liver; Vector: pcNS-D2; Site 1: EcoRI;
Site 2: NotI; The poly (A)+ RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then decapped
with tabacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including
EcoRI site by treatment of T4 RNA ligase and the first
strand cDNA was synthesized from oligo dt-selected mRNA by
priming with dt-tailed vector. The dt-tailed vector was
adjusted to have about 60nt. The cDNA vector was
circularized with E. coli DNA ligase after digestion of
EcoRI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
obtained cDNA vectors were used for transformation of
competent cells E. coli Top10F by electroporation method.

The cDNA libraries constructed by this method are full-length enriched cDNA library. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promoter as 5' primer and N(dt)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original library and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the substracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli Top10F with electroporation method."

/note="Organ: Liver; Vector: pCNS-D2; Site_1: EcoRI; Site_2: NotI; The poly (A) + RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tobacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoRI site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dt-selected mRNA by priming with dt-tailed vector. The dt-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1517-1530 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in RIKEN Genomic Sciences Center and Genome Science Laboratory in RIKEN Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Cells were provided by Hiroo Iwata (Department of Reproductive Materials Field of Tissue Engineering Institute for Frontier Medical Sciences, Sakyo-ku, Kyoto, 606-8507, Japan) whose assistance we gratefully acknowledge.
Please visit our web site (<http://genome.gsc.riken.go.jp>) for further details.

  The sequence contained an oligo-dT track that was present in the
  oligonucleotide that was used to prime the synthesis of first
  strand cDNA and therefore this may represent a bonafide poly A
  tail. cDNA library Preparation: M.B. Soares Lab Clone distribution:
  NCI-CCGAP clone distribution information can be found through the
  I.M.A.G.E. Consortium/LLNL at:
  www-bio.llnl.gov/bbrp/image/image.html

        The NCI_CGAP_Sub3 library is a subtracted library derived
        from the NCI_CGAP_Sub1 library, which is a subtracted
        library derived from BI. BI constitutes a mixture of 21
        normalized or subtracted NCI_CGAP libraries:
        NCI_CGAP_Co4, NCI_CGAP_Pr22, NCI_CGAP_Pr28, NCI_CGAP_Co10,
        NCI_CGAP_Co16, NCI_CGAP_Kid5, NCI_CGAP_Kid12,
        NCI_CGAP_Kid3, NCI_CGAP_Kid11, NCI_CGAP_Lym2,
        NCI_CGAP_Br23, NCI_CGAP_Co8, NCI_CGAP_C111, NCI_CGAP_Lei2,
        NCI_CGAP_Brn23, NCI_CGAP_Lu5, NCI_CGAP_Lu24,
        NCI_CGAP_Lu19, NCI_CGAP_GC4, NCI_CGAP_GC6,
        NCI_CGAP_Brn25. These 21 libraries were pooled and a
        single-stranded DNA preparation of the resulting mixture
        was used as a tracer in a subtractive hybridization with
        a driver whose composition is detailed below:
        NCI_CGAP_Kid3 pool 1 LLAM 3334-3337, 3682-3683,
        3798-3803 (IMAGE CloneIDs 132376-132391),

NEDO human cDNA project (New Energy and Industrial Technology Developmental Organization, Japan); cDNA library construction: Helix Research Institute (HRI); 5'-end one pass sequencing: HRI, Research Association for Biotechnology (RAB) and Biotechnology Center, National Institute of Technology and Evaluation; 3'-end one pass sequencing: RAB. The reason of remaining 5'-end 'N': This sequence was generated from 5'-end region of cDNA insert including about 20 base of the sequence before 'N'. This cDNA was obtained from oligo-capped cDNA library by which method 5'-end of mRNA was efficiently cloned. Therefore remaining 5'-end 'N' is important for a detection of transcription start site of this mRNA.

/note="Vector: pSL1180; Site 1: EcoRI; Site 2: XhoI; The library was prepared from polyA+ RNA from the roots of 1-year-old loblolly pine (Pinus taeda) cuttings that were rooted and then planted in washed sand. The rooted cuttings were maintained for 27 days (April 2003 harvest) under ambient conditions in a local greenhouse. They were kept on a weekly regimen of 0.5x nutrient-complete Hoagland's solution and supplemented with additional water sufficient to maintain a 15% soil moisture content. Twenty-four hours (24 h) prior to harvesting roots for mRNA preparation, the potted trees were tipped 90 degree to lay the pots on their sides to induce a gravitropic response. Double-stranded cDNA was cloned unidirectionally into pSL1180. Inserts can be excised with EcoRI (5' end) and XhoI (3' end)."

 RNA prepared and library constructed by W. Walter Lorenz (School of Forest Resources, University of Georgia); plant material prepared by Craig Zimmermann (School of Forest Resources, University of Georgia) using rooted cuttings provided by the Forest Biology Research Cooperative (FBRC) and the CCLONES project at the University of Florida; sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.
 Seq primer: JENREV (CAGAACACGTATGACC).

 RNA prepared and library constructed by W. Walter Lorenz (School of Forest Resources, University of Georgia); plant material prepared by Craig Zimmermann (School of Forest Resources, University of Georgia) using rooted cuttings provided by the Forest Biology Research Cooperative (FBRC) and the CCLONES project at the University of Florida; sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.
 Seq primer: M13-21 (TGTAACGACGCGCCAGT)
 POLYA=No.

 /notes="Vector: pSL180; Site:1: EcoRI; Site:2: XhoI; The library was prepared from polyA+ RNA from the roots of 1-year-old loblolly pine (Pinus taeda) cuttings that were rooted and then planted in washed sand. The rooted cuttings were maintained for 27 days (April 2003 harvest) under ambient conditions in a local greenhouse. They were kept on a weekly regimen of 0.5x nutrient-complete Hoagland's solution and supplemented with additional water sufficient to maintain a 15% soil moisture content. Twenty-four hours (24 h) prior to harvesting roots for mRNA preparation, the potted trees were tipped 90 degree to lay the pots on their sides to induce a gravitropic response. Double-stranded cDNA was cloned unidirectionally into pSL180. Inserts can be excised with EcoRI (5' end) and XhoI (3' end)."

; REFERENCE/DOCKET NUMBER: ALX-129
; TELECOMMUNICATION INFORMATION:
; TELEPHONE: (203) 255 1400
; TELEFAX: (203) 254 1101
; INFORMATION FOR SEQ ID NO: 12:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 8540 base pairs
; TYPE: Nucleic Acid
; STRANDEDNESS: Double
```

```
; TOPOLOGY: Circular
; MOLECULE TYPE: Other nucleic acid
; DESCRIPTION: Apex-3P Eukaryotic
; DESCRIPTION: Expression Vector
PCT-US96-05611A-12

Query Match      81.2%; Score 13.8; DB 7; Length 8540;

US-09-760-897A-23
; Sequence 23, Application US/09760897A
; Patent No. 7033782
; GENERAL INFORMATION:
; APPLICANT: HARRINGTON, JOHN J.
; APPLICANT: SHERF, BRUCE
; APPLICANT: RUNDLETT, STEPHEN
; TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR NON-TARGETED ACTIVATION OF
; TITLE OF INVENTION: ENDOGENOUS GENES
; FILE REFERENCE: ATX7CP4D15CNRC
; CURRENT APPLICATION NUMBER: US/09/760,897A
; CURRENT FILING DATE: 2001-01-17
; PRIOR APPLICATION NUMBER: 09/515,124
; PRIOR FILING DATE: 2000-02-27
; PRIOR APPLICATION NUMBER: 09/276,820
; PRIOR FILING DATE: 1999-03-26
; PRIOR APPLICATION NUMBER: 09/263,814
; PRIOR FILING DATE: 1999-03-08
; PRIOR APPLICATION NUMBER: 09/253,022
; PRIOR FILING DATE: 1999-02-19
; PRIOR APPLICATION NUMBER: 09/159,643
; PRIOR FILING DATE: 1998-09-24
; PRIOR APPLICATION NUMBER: 08/941,223
; PRIOR FILING DATE: 1997-09-26
; NUMBER OF SEQ ID NOS: 3
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 23
; LENGTH: 9737
; TYPE: DNA
; ORGANISM: Homo sapiens
; FEATURE:
; NAME/KEY: modified_base
; LOCATION: (8347)
; OTHER INFORMATION: a, c, t, g, other or unknown
; FEATURE:
; NAME/KEY: modified_base
; LOCATION: (8499)
; OTHER INFORMATION: a, c, t, g, other or unknown
US-09-760-897A-23

OM nucleic - nucleic search, using sw model

Run on: June 10, 2006, 15:26:46 ; Search time 651.1 Seconds
(without alignments)
320.825 Million cell updates/sec

Title: US-10-600-816-31

Perfect score: 17

Sequence: 1 gccacgcttgccgag 17

Scoring table: IDENTITY_NUC

Gapop 10.0 , Gapext 1.0

Searched: 18892170 seqs, 6143817638 residues

Total number of hits satisfying chosen parameters: 37784340

Minimum DB seq length: 0

Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%

Maximum Match 100%

Listing first 1000 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Baylor Plaza, Houston, TX 77030, USA
On Sep 1, 1999 this sequence version replaced gi:5757565.
INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email
gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the
entire insert of this clone. Overlapping regions of clones are only
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches
of a local database that includes entries from dbSTS, GDB, and
local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green,
unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
EST and cDNA sequences. Genes demonstrate at least two exons
flanked by consensus splice sites that maintained sequence
continuity across the splice junctions. Sequences that are not
identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
standard of double strand coverage with a minimum of 2 clones and 2
reads with no ambiguities or 2 chemistries with a minimum of 2
clones and 3 reads with no ambiguities. If the sequence quality for
a region does not meet this standard, it will be indicated in the
annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
standards - estimated error rate less than 1 per 10,000 bases.
Reports of lowest quality individual bases and measures of base
quality are listed below. Description of the metrics can be found
at URL:

<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

TITLE JOURNAL

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:23264229.

The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

Center project name: GGPI

Center clone name: CH230-183A24

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 193499 bases at least Q40

Consensus quality: 195436 bases at least Q30

Consensus quality: 196841 bases at least Q20

Estimated insert size: 201950; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 2 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

* 1 204625: contig of 204625 bp in length

* 204626 204725: gap of unknown length

* 204726 206082: contig of 1357 bp in length.

----- Project Information
Center project name: hzv
Center clone name: 147H21

```

This sequence was finished as follows unless otherwise noted:
all regions were double-stranded, sequenced with an
alternate chemistry, or covered by high quality data
(i.e., phred quality >= 30); an attempt was made to resolve
all sequencing problems, such as compressions and repeats;
all regions were covered by at least one plasmid subclone
or more than one M13 subclone; and the assembly was confirmed
by restriction digest.

CLONE LENGTH: This sequence represents the entire insert of
this clone unless otherwise noted. If there are overlapping
clones, the overlaps are noted in the beginning and end of
the Features section.

Contact: nisc.zoo@nhgri.nih.gov
----- Project Information
Center project name: ggc
Center clone name: 362A08

The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 121178 bases at least Q40
Consensus quality: 121304 bases at least Q30
Consensus quality: 121341 bases at least Q20
Insert size: 125000; agarose-fp
Quality coverage: 121362; sum-of-contigs
Quality coverage: 8.26x in Q20 bases; agarose-fp
Quality coverage: 8.51x in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 25692: contig of 25692 bp in length
* 25693 25792: gap of unknown length
* 25793 121462: contig of 95670 bp in length.

                This sequence was finished as follows unless otherwise noted: all
                regions were either double-stranded or sequenced with an alternate
                chemistry or covered by high quality data (i.e., phred quality >=
                30); an attempt was made to resolve all sequencing problems, such
                as compressions and repeats; all regions were covered by at least
                one subclone; and the assembly was confirmed by restriction digest,
                except on the rare occasion of the clone being a YAC.

            JOURNAL Submitted (30-MAY-2003) Takuji Sasaki, National Institute of
            Agrobiological Sciences, Rice Genome Research Program; Kannondai
            2-1-2, Tsukuba, Ibaraki 305-8602, Japan
            (E-mail:tsasaki@nias.affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/,
            Tel:81-298-38-7441, Fax:81-298-38-7468)
            On Jul 27, 2004 this sequence version replaced gi:45752574.
            Genes were predicted from the integrated results of the following:
            GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH
            (http://www.softberry.com/), GeneMark.hmm
            (http://opal.biology.gatech.edu/GeneMark/), Glimmer
            (http://www.tigr.org/tdb/glimmer/glimr_form.html), RiceHMM

```

(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor (http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), sim4 (http://globin.cse.psu.edu/html/docs/sim4.html), gap2 (http://www.tigr.org/software/glimmer/), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP or DBJ. Protein homologues of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of B1054C11 clone has an overlap with B1106B03 (DBJ: AP006449) clone at 5' end and an overlap with B1043F11 (DBJ: AP006156) clone at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://rgp.dna.affrc.go.jp/GenomeSeq.html>.

1. 144430
/organism="Homo sapiens"
/mol_type="genomic DNA"
/db_xref="taxon:9606"
/chromosome="17"

FEATURES source

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P. Y., Zhao, B., Frengen, E., Tatenno, M., Cataneese, J. J., and de Jong, P. J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. *Genomics* 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (<http://bacpac.med.buffalo.edu>)

VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

Actual start of this clone is at base position 1 of RP11-724M22;
actual end is at base position 150013 of RP11-724M22.

Direct Submission

Submitted (05-JUL-2001) Takuji Sasaki, National Institute of
 Agricultural Sciences, Rice Genome Research Program, Kannondai
 2-1-2, Tsukuba, Ibaraki 305-8602, Japan
 (E-mail:tsasaki@nias.affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/,
 Tel:81-298-38-7441, Fax:81-298-38-7468)

On Apr 16, 2002 this sequence version replaced gi:16904699.
 Genes were predicted from the integrated results of the following:

GENSCAN (http://ccr-081.mit.edu/GENSCAN.html), FGENESH

(http://www.softberry.com/), GeneMark.hmm

(http://opal.biology.gatech.edu/GeneMark/), Glimmer

(http://opal.biology.gatech.edu/glimmer/glmr form.html), RiceHMM

(http://www.tigr.org/tdb/glimmer/glmr form.html), SplicePredictor

(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor

(http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), sim4

(http://globin.cse.psu.edu/html/docs/sim4.html), gap2

(http://www.tigr.org/software/glimmer/), BLASTN and BLASTX. The
 genomic sequence was searched against NCBI NonRedundant Protein
 database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA
 sequence database at RGP or DDBJ. Protein homologies of the coding

regions were searched against NCBI NonRedundant Protein database
 with BLASTP. ESTs represent the identified cDNA sequences using
 BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
 Full-length cDNAs represent the identified cDNA sequences using
 BLASTN with the corresponding DDBJ accession no.
 A gene with identity or significant homology to a protein is
 classified based on the protein name to indicate the homology level
 such as same name, 'putative-' and '-like protein'. A gene without
 significant homology to any protein but with full-length cDNA or
 EST homology (covering almost the entire length of partial
 sequence) is classified as an 'unknown' protein. A gene predicted
 by two or more gene prediction programs is classified as a
 'hypothetical' protein according to IRGSP standard. A gene
 predicted by a single gene prediction program is also classified as
 a probable 'hypothetical' protein and is included as a
 miscellaneous feature of the sequence.
 The orientation of the sequence is from SP6 to T7 of the PAC clone.
 This sequence of P0697D09 clone has an overlap with P0503E05 (DDBJ:
 AP003021) clone at 5' end. Detailed information on overlap and
 assembly quality together with annotation of this entry is
 available at <http://rgp.dna.affrc.go.jp/GenomeSeq.html>.

TITLE	Direct Submission								
JOURNAL	Submitted (06-DEC-2000) Takuji Sasaki, National Institute of Agricultural Sciences, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan								
COMMENT	(E-mail:tsasakienias.affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/, Tel:81-298-38-7441, Fax:81-298-38-7468) On Mar 28, 2001 this sequence version replaced gi:11602828. Genes were predicted from the integrated results of the following: GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH (http://www.softberry.com/), GeneMark (http://opal.biology.gatech.edu/GeneMark/), GlimmerH (http://www.tigr.org/tdb/glimmer/glmr_form.html), RiceHMM (http://rgp.dna.affrc.go.jp/RiceHMM/), SplinePredictor (http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), sim4 (http://globin.cse.psu.edu/html/docs/sim4.html), gap2 (http://www.tigr.org/software/glimmer/), BLASTN and BLASTX. The genomic sequence was searched against NCBI Nonredundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequences were searched at RGP or DDBJ. Protein homologues of the coding regions were searched against NCBI Nonredundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative', and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene

predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.
The orientation of the sequence is from T7 to SP6 of the PAC clone. This sequence of P0503E05 clone has an overlap with P0460H02 (DDBJ: AP003257) clone at 5' end and with P0697D09 (DDBJ: AP003856) clone at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://rgp.dna.affrc.go.jp/GenomeSeq.html>.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-23 BAC Library has been constructed by Kazutoyo Oseawa and Minako Tatenio in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
 On Nov 20, 2002 this sequence version replaced gi:23196239.
 The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 Contact: hgsc-help@bcm.tmc.edu
 ----- Project Information
 Center project name: RAFO
 Center clone name: CH230-342K24

----- Summary Statistics
 Assembly program: Phrap; version 0.990329
 Consensus quality: 158599 bases at least Q40
 Consensus quality: 160475 bases at least Q30
 Consensus quality: 161407 bases at least Q20
 Estimated insert size: 161556; sum-of-contigs estimation
 Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
 * NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* 1 165449: contig of 165449 bp in length
 * 165450 165549: gap of unknown length
 * 165550 170956: contig of 5407 bp in length.

Sequence Produced by Berkeley PGA
 Web site: <http://pga.lbl.gov>
 Center Code: PGABERK
 Center Project Name: O148
 Bac Clone Name: LB3-44H21

This sequence has been compared to sequences of other species
 using Vista (<http://www-gsd.lbl.gov/VISTA>). The results can be
 viewed at:
http://pga.lbl.gov/cgi-bin/search_cvcgd?type=ntvalue-LIPC

The order-orientation of the draft sequence was accomplished by
 using:
 Avid (<http://baboon.math.berkeley.edu/mavid>),
 Lagan (<http://lagan.stanford.edu/>) and paired end information.

Funding agent: Programs for Genomic Applications (NHUBI)

If the Bac Library Name is LB1 to LB4, please see website
 for the description: <http://www-gsd.lbl.gov/cheng/BAC.html>
 These libraries are available through the BACPAC Resources Center:
<http://www.chori.org/bacpac/libraryres.htm> as LBNL-1 to LBNL-4.

Summary Statistics:

Sequencing vector: plasmid; pUC18
 Chemistry: Dye-terminator Big Dye
 Assembly program: Phrap version 0.990329.
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 7 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submitter.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.
 * 1 1086: contig of 1086 bp in length
 * 1087 1186: gap of unknown length
 * 1187 17979: contig of 16793 bp in length
 * 17980 18079: gap of unknown length
 * 18080 60719: contig of 42640 bp in length
 * 60820 60819: gap of unknown length
 * 60820 73619: contig of 12800 bp in length
 * 73620 73719: gap of unknown length
 * 73720 87458: contig of 13739 bp in length
 * 87459 87558: gap of unknown length
 * 87559 166569: contig of 79011 bp in length
 * 166570 166669: gap of unknown length
 * 166670 176362: contig of 9693 bp in length.

 On Jun 24, 2003 this sequence version replaced GI:32131063.
 Sequence from the Mouse Genome Sequencing Consortium whole genome
 shotgun may have been used to confirm this sequence. Sequence data
 from the whole genome shotgun alone has only been used where it has
 a phred quality of at least 30.
 ----- Genome Center
 Center: Wellcome Trust Sanger Institute
 Center code: SC
 Web site: <http://www.sanger.ac.uk>
 Contact: humquery@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.
 Where differences are found these are annotated as variations
 together with a note of the overlapping clone name. Note that the
 variation annotation may not be found in the sequence submission
 corresponding to the overlapping clone, as we submit sequences with
 only a small overlap as described above.
 This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one plasmid subclone or more than one M13 subclone; and the
 assembly was confirmed by restriction digest, except on the rare
 occasion of the clone being a YAC.
 The following abbreviations are used to associate primary accession

numbers given in the feature table with their source databases:
 En:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
 on the WORMPEP database can be found at

 ----- Summary Statistics
 Sequencing vector: M13; M7815; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.960731
 Consensus quality: 150637 bases at least Q40
 Consensus quality: 166570 bases at least Q30

Consensus quality: 173803 bases at least Q20
Insert size: 182000; agarose-fp
Insert size: 178212; sum-of-contigs
Quality coverage: 4.0 in Q20 bases; agarose-fp
Quality coverage: 4.1 in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently
* consists of 10 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.
* as soon as it is available and the accession number will
* be preserved.

* 1 3511: contig of 3511 bp in length
* 3512: gap of 100 bp
* 3611: gap of 100 bp
* 3612 6703: contig of 3092 bp in length
* 6704 6803: gap of 100 bp

```

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

REFERENCE
AUTHORS 3 (bases 1 to 185079)
TITLE Rat Genome Sequencing Consortium.
JOURNAL Direct Submission
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
COMMENT On Nov 20, 2002 this sequence version replaced gi:22855833.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Project Information
Center project name: hzf
Center clone name: 251019

This sequence was finished as follows unless otherwise noted:
all regions were double-stranded, sequenced with an
alternate chemistry, or covered by high quality data
(i.e., phred quality >= 30); an attempt was made to resolve
all sequencing problems, such as compressions and repeats;
all regions were covered by at least one plasmid subclone
or more than one M13 subclone; and the assembly was confirmed
by restriction digest.

```

CLONE LENGTH: This sequence represents the entire insert of this clone unless otherwise noted. If there are overlapping clones, the overlaps are noted in the beginning and end of the Features section.

----- Summary Statistics

Sequencing vector: PCR products; 100% of reads

Chemistry: Dye-terminator ET-amersham; 100% of reads

Assembly program: Phrap; version 0.990129

Consensus quality: 178641 bases at least Q40

Consensus quality: 184743 bases at least Q30

Insert size: 187950; sum-of-contigs

Quality coverage: 4.84x in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently consists of
 27 contigs. The true order of the pieces is not known and their

order in this sequence record is arbitrary. Gaps between the
 contigs are represented as runs N, but the exact sizes of the gaps
 are unknown. This record will be updated with the finished sequence
 as soon as it is available and the accession number will be
 preserved

COMMENT
On May 29, 2002 this sequence version replaced gi:21206073.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the
entire insert of this clone. Overlapping regions of clones are only
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.

ANNOTATION OF FEATURES:
of STSS are identified using ePCR (Genome Res. 7:541-550) searches
of a local database that includes entries from dbSTS, GDB, and
local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green,
unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
EST and cDNA sequences. Genes demonstrate at least two exons
flanked by consensus splice sites that maintained sequence
continuity across the splice junctions. Sequences that are not
identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
standard of double strand coverage with a minimum of 2 clones and 2
reads with no ambiguities or 2 chemistries with a minimum of 2
clones and 3 reads with no ambiguities. If the sequence quality for
a region does not meet this standard, it will be indicated in the
annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
standards - estimated error rate less than 1 per 10,000 bases.
Reports of lowest quality individual bases and measures of base
quality are listed below. Description of the metrics can be found
at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is overlapped by AC115118.

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8x average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 195502 bases at least Q40
Consensus quality: 196012 bases at least Q30
Consensus quality: 196230 bases at least Q20
Insert size: 174000; agarose-fp
Insert size: 196300; sum-of-contigs
Quality coverage: 10.63x in Q20 bases; agarose-fp
Quality coverage: 9.42x in Q20 bases; sum-of-contigs

Qy 1 CTTTCTTCATAGTCTTTG 19
|||||

* NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 1 61967: contig of 61967 bp in length

* 61968 62067: gap of unknown length

* 62068 128700: contig of 66633 bp in length

* 128701 128800: gap of unknown length

* 128801 144849: contig of 16049 bp in length

* 144850 144949: gap of unknown length

* 144950 169039: contig of 24090 bp in length

* 169040 169139: gap of unknown length

* 169140 196700: contig of 27561 bp in length.

```

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out

Gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

```

Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 215445 bases at least Q40
Consensus quality: 216320 bases at least Q30
Consensus quality: 216749 bases at least Q20
Insert size: 203000; agarose-fp
Insert size: 217069; sum-of-contigs
Quality coverage: 9.44x in Q20 bases; agarose-fp
Quality coverage: 8.83x in Q20 bases; sum-of-contigs
-----

```

* NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

```

1 51328: contig of 51328 bp in length

On Nov 13, 2002 this sequence version replaced gi:23603910.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

COMMENT
On Nov 13, 2002 this sequence version replaced gi:2277986.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 215114 bases at least Q40
Consensus quality: 217886 bases at least Q30
Consensus quality: 219758 bases at least Q20
Estimated insert size: 221396; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

* 1 101341: contig of 101341 bp in length
* 101342 101441: gap of unknown length
* 101442 219685: contig of 118244 bp in length
* 219686 219785: gap of unknown length
* 219786 247690: contig of 27905 bp in length.

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23269678.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Contact: hgsc-help@bcm.tmc.edu

----- Project Information
Center project name: GMYB
Center clone name: CH230-69K7
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 238815 bases at least Q40
Consensus quality: 241421 bases at least Q30
Consensus quality: 243001 bases at least Q20
Estimated insert size: 245676; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* 1 241216: contig of 241216 bp in length
* 241217 241316: gap of unknown length
* 241317 264502: contig of 23186 bp in length
* 264503 264602: gap of unknown length
* 264603 266542: contig of 1940 bp in length
* 266543 266642: gap of unknown length
* 266643 268030: contig of 1388 bp in length.

COMMENT * NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 12938: contig of 12938 bp in length
* 12939 13038: gap of unknown length
* 13039 67767: contig of 54729 bp in length.

This is a finished sequence consisting of 1 contig high quality.
The BAC clone contains flowering locus C gene and located on the
cytogenetic chromosome 10 by genetic map and FISH analyses.

Direct Submission
Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegasanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Nov 16, 2001 this sequence version replaced gi:15591063.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr9
RP11-507F17 is from the library RPCI-11.2 constructed by the group
of Pieter de Jong. For further details see

Contact: vegasanger.ac.uk

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

Direct Submission
Submitted (29-MAY-2005) Human Genome Sequencing Center, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 29, 2005 this sequence version replaced gi:66773448.
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

----- Project Information
Center project name: gte
Center clone name: 190B16

This sequence was finished as follows unless otherwise noted:
all regions were double-stranded, sequenced with an
alternate chemistry, or covered by high quality data
(i.e., phred quality >= 30); an attempt was made to resolve
all sequencing problems, such as compressions and repeats;
all regions were covered by at least one plasmid subclone
or more than one M13 subclone; and the assembly was confirmed
by restriction digest.

CLONE LENGTH: This sequence represents the entire insert of
this clone unless otherwise noted. If there are overlapping
clones, the overlaps are noted in the beginning and end of
the Features section.

 Direct Submission
 Submitted (28-MAY-2005) Human Genome Sequencing Center, Baylor
 College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
 On May 28, 2005 this sequence version replaced gi:66392614.
 Sequencing is completed to a minimum standard of double strand
 coverage with a minimum of 2 clones and 2 reads with no ambiguities
 or 2 chemistries with a minimum of 2 clones and 3 reads with no
 ambiguities. If the sequence quality does not meet this standard,
 it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by
 Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui
 Zhang.

Exon/Intron boundaries of identified genes were chosen if there
 were canonical splice junctions that maintained sequence continuity

Pred. No. is the number of results' predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX XX
XX New nucleic acid molecule encoding a human G-protein coupled receptor.
XX RAI3, useful for preventing, treating or ameliorating chronic obstructive
XX pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms

PT of COPD.
XX Disclosure; SEQ ID NO 32; 301pp; English.
PS The present sequence is that of an antisense PCR primer based on DNA
XX encoding a peptide ADI28458 from human G-protein coupled receptor
CC retinoic acid induced 3 (RAI-3) ADI28460. The peptide was identified in
CC studies of RAI-3 phosphorylation in response to cigarette smoke. The
CC primer can be used in a PCR to identify individuals at risk for
CC developing chronic obstructive pulmonary disease (COPD). RAI-3 is
CC tyrosine phosphorylated and/or is associated/complexed with tyrosine
CC phosphorylated proteins only in cells that have been exposed to cigarette
CC smoke. Since RAI-3 is primarily expressed in lung tissue, and since a
CC cigarette smoke is a major causative factor of COPD, RAI-3 provides a
CC novel cellular target for identifying modulators, e.g. agonists or
CC antagonists, useful for the treatment and/or prevention of COPD and
CC related disorders such as emphysema and chronic bronchitis. RAI-3
CC modulators, e.g. agonists and antagonists, especially antisense
CC compounds, can be used to treat COPD and other disorders an diseases
CC associated with regulation of NF-kB and/or its associated or interacting
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
CC the RAI-3 gene are useful for determining COPD association in
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
CC preventing, treating or ameliorating disorders related to aberrant GPCR
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
CC disorders or conditions, autoimmune disorders, disorders related to
CC hyperimmune activity, inflammatory conditions, disorders related to
CC aberrant acute phase responses, hypercongenital conditions, birth
CC defects, necrotic lesions, wounds, organ transplant rejection, renal
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
CC related to aberrant signal transduction, proliferation disorders,
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or
XX regulation (all claimed).

XX
XX New isolated nucleic acids and polypeptides capable of eliciting a
PT humoral and/or cellular immune response, useful for diagnosing,
PT preventing or treating cancer, particularly colon cancer.
XX
XX Claim 1; SEQ ID NO 1937; 87pp; English.
XX
XX The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT Novel human proteins having hydrophobic domains used for research and
XX diagnostic purposes.
XX
PS Claim 3; Page 88; 117pp; English.
XX
CC This sequence represents the hydrophobic domain containing protein, clone
CC HP10549 coding region. The sequence is isolated from a human stomach
CC cancer cell line. The invention relates to human proteins with
CC hydrophobic domains, the DNA and the cDNA encoding them. The
CC polynucleotides and proteins are predicted to have biological activities
CC which make them suitable for treating, preventing or ameliorating medical
CC conditions in humans and animals. Suggested activities include
CC nutritional activity (nutritional source or supplement); cytokine and
CC cell proliferation/differentiation activity; immune stimulating (e.g. as
CC vaccines) or suppressing activity (e.g. to treat various immune
CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
CC organ transplantation); haematopoiesis regulating activity (e.g. in
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
CC activity (e.g. wound healing and tissue repair, ulcers, burns,
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
CC activity; haemostatic and thrombolytic activity (e.g. treating
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
CC tumour inhibition activity. The polynucleotides are also stated to be
CC useful for gene therapy. Other activities include inhibiting infections
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;
CC treatment of depression; treatment of pain; hormonal or endocrine
CC activity. The polynucleotides may also be used for recombinant expression
CC of the protein

PT New isolated nucleic acid that is differentially expressed in cancer
PT tissues useful for determining the presence of colon cancer in a cell or
PT tissue type, and in antisense therapy.
XX
PS Claim 1; Fig 1; 796pp; English.
XX
CC ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially
CC expressed in cancer tissues. ABQ78993 to ABQ79004 represent proteins
CC encoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be
CC used in antisense therapy. An antibody immunoreactive with a polypeptide
CC encoded by (I) is useful for detecting cancer in a patient sample, and
CC for detecting the presence or absence of a polynucleotide encoded by a
CC nucleic acid which hybridises to (I) in a cell. A probe/primer derived
CC from (I) can be used for determining the presence of a nucleic acid which
CC hybridises to (I), and for determining the phenotype of cells in a sample
CC of cells from a patient. (I) is useful for determining the presence of
CC colon cancer in a cell or tissue type, for determining the presence or
CC state of other type of cancer, in antisense therapy, to generate
CC macroarrays on a solid surface, to identify a chromosome on which the
CC corresponding gene resides, and in tissue profiling, forensics, genetic
CC analysis, mapping and diagnostic applications. (I) can be used to raise
CC antibodies, and to screen for peptide analogues and antagonists

XX PT Novel isolated polypeptide encoded by breast cancer marker gene, useful
PT for diagnosing, staging, monitoring, prognosing and treating diseases
PT associated with breast cancer.
XX PS Disclosure; Page 187-188; 725pp; English.
XX CC The invention relates to an isolated polypeptide encoded by a breast
CC cancer marker gene comprising any of 1417 21-805 nucleotide sequences,
CC given in the specification. The methods of the invention are useful for
CC diagnosing patients having an identified breast mass or symptoms
CC associated with breast cancer, to diagnose breast cancer or its
CC precursors, and for monitoring the efficacy of treatment of a breast
CC cancer patient (e.g. efficacy of chemotherapy). The methods are also
CC useful for evaluating a patient before, after or during therapy, to

CC evaluate the reduction in a tumour burden. The breast cancer marker gene
CC proteins are useful as immunogens for raising antibodies, by immunising a
CC mammal with a breast cancer marker protein. The marker proteins are
CC useful as bait proteins in a two-hybrid or three-hybrid assay, to
CC identify other proteins which bind to or interact with the marker
CC proteins. The breast cancer marker genes are useful as surrogate marker
CC genes for one or more disorders, disease states or conditions leading to
CC disease states, in particular, breast cancers. The breast cancer marker
CC genes are useful as pharmacodynamic marker genes. An antibody which
CC selectively binds to a protein of a breast cancer marker gene is useful
CC for treating cancers, particularly breast cancers. The host cell of the
CC invention is useful for producing non-human transgenic animals. This
CC polynucleotide sequence represents one of the breast cancer marker genes
CC of the invention

PT compounds that modulates diagnosing and treating disease condition

associated with GPCR dysfunction e.g. autoimmune diseases, angina pectoris, Parkinson's disease.

Claim 151; SEQ ID NO 1137; 542pp; English.

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR gene of the invention; a mouse comprising a mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the transgenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising probes which hybridise to GPCR polynucleotides of the invention. The invention further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, depression, diabetic neuropathy, Parkinson's disease or schizophrenia); disorders of the adrenal gland; disorders of the colon or intestine (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders; blood disorders (e.g., anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g., obesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases); and disorders of the kidney, liver, lung, breast, ovary, uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a GPCR-encoding nucleic acid of the invention. Note: The full sequence data for this patent did not form part of the printed specification; those sequences not shown were obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Novel polynucleotides useful for the treatment of various conditions including wounds and cancer.
Claim 1; Page 155; 235pp; English.
The invention relates to novel nucleic acid sequences derived from rat dermal papilla, human keratinocytes and neonatal foreskin fibroblasts, and mouse embryonic skin, keratinocyte stem cells and transit amplifying cells. Polypeptides of the invention may be used to treat inflammation, cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to inhibit binding of HIV-1 to leukocytes. The invention may also be used to treat growth and developmental defects, skin wounds and hair follicle disorders. Sequences AAZ61606-Z61832 represent cDNA sequences derived from several mouse, rat or human skin cell types. Sequences AAZ61606-Z61649, AAZ61725-Z61765, AAZ61802-Z61811 and AAZ61826 encode proteins with an N-terminal signal sequence, indicating that the proteins are secreted. Sequences AAZ61650-Z61668, AAZ61766-Z61780, AAZ61812-Z61817 and AAZ61827-Z61829 encode proteins with one or more putative transmembrane domains

PT New isolated polynucleotide used in the identification of genetic
PT disorders and encoding polypeptides used for treating inflammatory
PT disease, cancer and neurological diseases.
XX
XX Claim 1; Page 210-211; 352pp; English.
PS
SS The present polynucleotide encodes a polypeptide which is expressed in
CC mammalian skin cells. The polypeptide is useful for stimulating
CC keratinocyte growth and motility, inhibiting the growth of cancer cells,
CC modulating angiogenesis, inhibiting angiogenesis and vascularisation of
CC tumours, modulating skin inflammation, stimulating the growth of
CC epithelial cells, inhibiting the binding of human immunodeficiency virus
CC (HIV)-1 to leukocytes, and treating inflammatory disease, cancer and
CC neurological diseases. The polynucleotide can be used as a marker, in the
CC identification of genetic disorders, and for the design of
CC oligonucleotides for examining expression patterns

PS
SS The present invention provides the protein and coding sequences of cDNAs
CC isolated from human, murine and rat skin cell libraries. The sequences

CC can be used in the development of therapeutic agents useful in the
CC treatment of skin diseases, including skin wounds, cancer, growth
CC defects, developmental defects and inflammatory diseases. The proteins
CC have important roles in the induction of hair growth, cell proliferation
CC and cell-cell interaction, in maintaining tissue integrity, in wound
CC healing and in modulating immune responses. The present sequence is a
CC cDNA of the invention

XX Combination for research/diagnostic applications and for monitoring
PT treatment of e.g., cancer, comprises polynucleotides comprising a
PT fragment of gene encoding membrane-associated proteins, receptors or ion
PT channels.
XX
XX Claim 1; Col 215-216; 147pp; English.
PS
XX
XX The invention relates to a combination comprising several polynucleotide
CC sequences comprising a fragment of gene encoding membrane-associated
CC proteins, receptors or ion channels. The combination is useful as a
CC probe, for research and diagnostic applications, for monitoring the
CC expression of several expressed polynucleotides, in the diagnosis and
CC monitoring of treatment of pancreatic disease, cancer, immunopathology or
CC neuropathology, for investigating an individual's predisposition to the
CC above disease, in genetic or gene expression analysis of polynucleotide
CC sequences, to investigate cellular responses to infection or drug
CC treatment, as hybridisable array elements in a microarray, to purify a
CC subpopulation of mRNAs, cDNAs or genomic fragments in a sample, in
CC diagnostics, prognostics and treatment regimens, in drug discovery and
CC development, in toxicological and carcinogenicity studies, and in
CC forensics or pharmacogenomics, to monitor the progression of disease, to
CC monitor the efficacy of treatment, to diagnose the conditions of the

CC pancreas e.g. diabetes, pancreatic cholera, hyperlipidaemia or
 CC fibrocystic disease, to diagnose a cancer e.g. leukaemia, adenocarcinoma
 CC or sarcoma, to diagnose immunopathologies e.g. AIDS, allergies, anaemia,
 CC asthma or gout, to diagnose neuropathologies e.g. Alzheimer's disease,
 CC dementia or Huntington's disease, to rapidly screen large numbers of
 CC candidate drug molecules and as query sequences against GenBank,
 CC SwissProt, BLOCKS and PRINTS databases. The combination is employed to
 CC fine tune the treatment regimen and thus the expression patterns
 CC associated with undesirable side effects are avoided. The present
 CC sequence represents a cDNA encoding a fragment of gene encoding human
 CC membrane-associated proteins, receptors or ion channels

XX Novel isolated antibody capable of binding to tumor-associated antigenic
 PT target polypeptide, useful for treating cell proliferative disorder e.g.
 PT cancer.
 XX
 XX Claim 1; SEQ ID NO 64; 337pp; English.

XX The invention relates to a novel isolated antibody binding to a
 CC polypeptide having at least 80% sequence identity to a polypeptide having
 CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
 CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
 CC specification, a polypeptide having any one of (AEA00127-AEA00202),
 CC lacking its associated signal peptide, or an extracellular domain of a
 CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
 CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
 CC An antibody of the invention has cytostatic activity. The antibody is
 CC useful for inhibiting growth of a cell expressing TAT188, which involves
 CC contacting the cell with the antibody. The cell is a cancer cell chosen
 CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
 CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.
 CC The antibody is also useful for detecting the level of TAT188
 CC polypeptide expressed in a test cell relative to a control cell, and for
 CC detecting the level of TAT188 polypeptide or a polypeptide having at
 CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test
 CC cell relative to a control cell. The antibody is useful for treating a
 CC preventing a cell proliferative disorder associated with increased
 CC expression or activity of a polypeptide having at least 80 % identity to
 CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
 CC The method of the invention is useful for inhibiting the growth of a
 CC cancer cell. The present sequence encodes a polypeptide of the invention.

XX Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds

PT to tumor-associated antigenic target polypeptide, useful for diagnosing

PT or treating cancer.

XX

PS Claim 1; SEQ ID NO 64; 96pp; English.

XX

XX This invention relates to a novel isolated antibody, for example anti-E16

CC or anti-TAT112 antibody, that binds to a tumor-associated antigenic

CC target polypeptide (TAT) and that lacks an associated signal peptide

CC sequence. The invention may be useful for the development of compounds

CC with a cytostatic activity acting as antagonists of the TAT188

CC polypeptide or RNA interference whilst the disclosed sequences may be

CC useful for gene therapy. The invention is useful for inducing the death

CC of a cell (such as a cancer cell chosen from breast, colon, rectum,

CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,

CC inhibiting proliferation or promoting cell death of a cell expressing

CC TAT188. In addition, the invention may be useful for detecting the level

CC of TAT188 polypeptide in a test cell relative to a control cell, or

CC treating or preventing a cell proliferative disorder associated with

CC increased expression of TAT188. The novel antibody of the invention is

CC useful for inhibiting the growth of a cancer cell and may be useful for

CC diagnosing or treating cancer. The present sequence is that of the human

CC TAT143 cDNA which encodes a protein against which an antibody of the

CC invention may be targeted.

XX

XX Novel human proteins having hydrophobic domains used for research and

PT diagnostic purposes.

XX

PS Claim 4; Page 111-113; 117pp; English.

XX This sequence represents the hydrophobic domain containing protein, clone
 CC HP10549 nucleotide sequence. The sequence is isolated from a human
 CC stomach cancer cell line. The invention relates to human proteins with
 CC hydrophobic domains, the DNA and the cDNA encoding them. The
 CC polynucleotides and proteins are predicted to have biological activities
 CC which make them suitable for treating, preventing or ameliorating medical
 CC conditions in humans and animals. Suggested activities include
 CC nutritional activity (nutritional source or supplement); cytokine and
 CC cell proliferation/differentiation activity; immune stimulating (e.g. as
 CC vaccines) or suppressing activity (e.g. to treat various immune
 CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic
 CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary
 CC inflammation, Guillain-Barre syndrome, myasthenia gravis, graft-versus-host disease
 CC and autoimmune inflammatory eye disease, as well as asthma, allergies and
 CC organ transplantation); haemopoiesis regulating activity (e.g. in
 CC treatment of myeloid or lymphoid cell deficiencies); tissue growth
 CC activity (e.g. wound healing and tissue repair, ulcers, burns,
 CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic
 CC activity; haemostatic and thrombolytic activity (e.g. treating
 CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and
 CC tumour inhibition activity. The polynucleotides are also stated to be
 CC useful for gene therapy. Other activities include inhibiting infections
 CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,
 CC malaria); effecting bodily characteristics such as, e.g. weight, colour,
 CC skin, effecting biorhythms or circadian cycles; enhancing fertility;
 CC treatment of depression; treatment of pain; hormonal or endocrine
 CC activity. The polynucleotides may also be used for recombinant expression
 CC of the protein

PT Diagnosing breast cancer in a patient comprises detecting the level of
 PT gene expression in cell or tissue samples, where a differential gene
 PT expression is indicative of breast cancer.

XX PS Claim 1; SEQ ID NO 307; 260pp + Sequence Listing; English.

XX The present invention relates to methods of diagnosing breast cancer in a
 CC patient, which comprise detecting the level of expression in a tissue
 CC sample of two or more genes selected from those shown in ABT09867-
 CC ABT1112, where a differential expression of the genes indicates breast
 CC cancer. The methods are useful in diagnosing, treating, detecting the
 CC progression, and in monitoring treatment of breast cancer in patients.
 CC The methods are also useful as a screening tool for agents that modulate
 CC the onset or progression of breast cancer. The breast cancer genes may be
 CC used as diagnostic markers for the prediction or identification of the
 CC malignant state of breast tissue, for confirming the type and progression
 CC of cancer, and for drug screening and assays. The present sequence is a
 CC coding sequence of the invention. Note: The sequence data for this patent
 CC did not form part of the printed specification, but was obtained in
 CC electronic format directly from WIPO at
 CC ftp.wipo.int/pub.published_pct_sequences

XX New G-protein coupled receptor-like retinoic acid induced gene 1 (GPCR-
 PT like RAIG1) polypeptide and gene, useful for diagnosing or treating

PT metabolic disorders, e.g. obesity, anorexia, cachexia or diabetes.
XX Claim 10; Page 16-17; 150pp; English.
PS
XX
CC The present sequence is that of human G-protein coupled receptor-like
CC retinoic acid induced gene 1 (GPCR-like RAIG1). This is the human
CC homologue of murine GPCR-like RAIG1. The murine gene was shown to be
CC differentially regulated during fasting-feeding cycles in mice, with
CC moderate induction early in fasting, down-regulation with extended
CC fasting and 4-fold up-regulation with feeding in recovery from fasting.
CC The differentially expressed gene, its mRNA, and the encoded protein, can
CC each be manipulated to detect and treat metabolic disorders associated
CC with up- or down-regulation of GPCR-like RAIG1 activity, such as obesity,
CC anorexia, cachexia or diabetes

XX Screening, diagnosing and/or treating carcinoma, including breast,
XX pancreatic, lung, liver, ovarian and colon cancer by detecting the change
XX in expression or activity of an RAIG1 polypeptide or encoding nucleic
XX acid molecule.
XX
XX Claim 1; Fig 2; 43pp; English.
XX
XX This sequence encodes retinoic acid-inducible gene 1 (RAIG1) polypeptide.

CC RAIG1 is an orphan G-protein coupled receptor (GPCR) located on
CC chromosome 12. RAIG1 shows a restricted expression pattern compared to a
CC related receptor, GPCR5B, which is widely expressed in peripheral and
CC central tissues. The RAIG1 cDNA and polypeptide sequence may be used in
CC the method of the invention for screening for and/or diagnosis of
CC carcinoma in a subject, and/or monitoring the effectiveness of carcinoma
CC therapy. The method comprises detecting and/or quantifying in a
CC biological sample obtained from the subject an RAIG1 polypeptide and a
CC nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule
CC are useful in the manufacture of a medicament for the treatment of
CC carcinoma, where the composition is a vaccine. An agent which interacts
CC with or causes change in the expression or activity of an RAIG1
CC polypeptide or nucleic acid molecule, is also useful in the manufacture
CC of a medicament for the treatment of carcinoma that is breast cancer,
CC pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon
CC cancer and/or osteosarcoma. They can also be used in the diagnosis and
CC screening of such carcinomas.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
 PT length cDNAs defined in the specification, and for the detection and/or
 PT diagnosis of the abnormality of the proteins encoded by the full-length
 PT cDNAs.

PS Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.

XX The present invention describes primer sets for synthesizing 5602 full-
 CC length cDNAs defined in the specification. Where a primer set comprises:
 CC (a) an oligo-dT primer and an oligonucleotide complementary to the
 CC complementary strand of a polynucleotide which comprises one of the 5602
 CC nucleotide sequences defined in the specification, where the
 CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
 CC of an oligonucleotide comprising a sequence complementary to the
 CC complementary strand of a polynucleotide which comprises a 5'-end
 CC sequence and an oligonucleotide comprising a sequence complementary to a
 CC polynucleotide which comprises a 3'-end sequence, where the
 CC oligonucleotide comprises at least 15 nucleotides and the combination of
 CC the 5'-end sequence/3'-end sequence is selected from those defined in the
 CC specification. The primer sets can be used in antisense therapy and in
 CC gene therapy. The primers are useful for synthesizing polynucleotides,
 CC particularly full-length cDNAs. The primers are also useful for the
 CC detection and/or diagnosis of the abnormality of the proteins encoded by
 CC the full-length cDNAs. The primers allow obtaining of the full-length
 CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
 CC AAH13633 to AAH18742 represent human cDNA sequences; AAH92446 to AAH95893
 CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
 CC oligonucleotides, all of which are used in the exemplification of the
 CC present invention

XX New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or autoimmune diseases.
XX Disclosure; Fig 1; 523pp; English.
XX The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83819) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell regeneration-related disease, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. AB242523 to AB242869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention

XX New genes that are up-regulated or down-regulated in cancers, useful as markers for diagnosing e.g. cancer, ischemia or heart diseases, or as therapeutic targets for screening drugs for treating these diseases.
XX Claim 8; Page 643-644; 767pp; English.
XX The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-regulated in specific cancers (e.g. about 1031 genes up-regulated in acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer related gene nucleotide sequences which encode the proteins given in ABR58521 to ABR58709. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a drug screening assay. The nucleic acid is useful as diagnostic markers or therapeutic targets. In particular, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in drug screening, particularly for identifying agents for treating these pathologies

 PT useful for diagnosing, prognosing or treating cancer, comprises detecting
 PT a nucleic acid in a biological sample.
 XX Claim 8; SEQ ID NO 619; 1385pp; English.
 XX The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
 CC whose expression is upregulated or downregulated in specific cancers or
 CC other diseases such as angiogenic or fibrotic disorders, and to methods

CC of determining the presence or absence of a pathological cell in a
 CC patient by detecting a nucleic acid at least 80% identical to those of
 CC the invention or by detecting a polypeptide of the invention. The
 CC invention also relates to expression vectors and host cells comprising a
 CC nucleic acid of the invention; antibodies which specifically bind a
 CC polypeptide of the invention; use of such antibodies for drug targeting;
 CC and methods of screening for modulators of activity or expression of the
 CC polypeptides and nucleic acids. The nucleic acids, polypeptides,
 CC antibodies and methods are useful for diagnosing, prognosing and treating
 CC cancer and other conditions such as psoriasis, ischaemia, heart disease,
 CC atherosclerosis, inflammatory diseases, autoimmune diseases, retinal
 CC neovascularisation syndromes, scarring and uterine fibroids. They may
 CC also be useful in wound healing and in contraception. The present
 CC sequence represents a nucleic acid sequence of the invention.

XX
XX New nucleic acid molecule encoding a human G-protein coupled receptor,
XX RAI3, useful for preventing, treating or ameliorating chronic obstructive
XX pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
XX of COPD.
XX
XX Claim 1; SEQ ID NO 2; 301pp; English.
XX
XX The present sequence is that of cDNA encoding a human G-protein coupled
XX receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
XX Proteomic methods were used to isolate cigarette smoke-inducible
XX tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
XX identified as being tyrosine phosphorylated and/or as being
XX associated/complexed with tyrosine phosphorylated proteins only in those
XX cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
XX expressed in lung tissue, and since cigarette smoke is a major causative
XX factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
XX novel cellular target for identifying modulators, e.g. agonists or
XX antagonists, useful for the treatment and/or prevention of COPD and
XX related disorders such as emphysema and chronic bronchitis. RAI-3
XX modulators, e.g. agonists and antagonists, especially antisense
XX compounds, can be used to treat COPD and other disorders and diseases
XX associated with regulation of NF-kB and/or its associated or interacting
XX signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
XX the RAI-3 gene are useful for determining COPD association in
XX individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
XX preventing, treating or ameliorating disorders related to aberrant GPCR
XX signaling or cell cycle regulation, pulmonary disorders, inflammatory
XX lung disorders, COPD, the underlying symptoms of COPD, COPD-related
XX disorders or conditions, autoimmune disorders, disorders related to
XX hyperimmune activity, inflammatory conditions, disorders related to
XX aberrant acute phase responses, hypercongenital conditions, birth
XX defects, necrotic lesions, wounds, organ transplant rejection, renal
XX diseases, ischemia-reperfusion injury, heart disorders, disorders
XX related to aberrant signal transduction, proliferation disorders,
XX cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
XX ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
XX nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
XX rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
XX pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
XX colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders
XX associated with aberrant cell adhesion, I-CAM function and/or regulation,
XX E-selectin function and/or regulation, or aberrant NF-kB function and/or
XX regulation (all claimed).

XX
XX Detecting pancreatic cancer-associated transcript in a biological sample,
XX useful for diagnosing or treating the disease, comprises contacting the
XX sample with a polynucleotide that selectively hybridizes to a specific
XX sequence.
XX
XX Claim 7; SEQ ID NO 9; 263pp; English.
XX
XX The present invention describes a method for detecting a pancreatic
XX cancer-associated transcript in a biological sample. The method comprises
XX contacting the biological sample with a polynucleotide that selectively
XX hybridizes to a sequence at least 80% identical to a sequence as shown in
XX any one of Tables 3 to 25 in the specification or having the GenBank
XX Accession Number AF279145. Also described: (1) diagnosing pancreatic
XX cancer in a human or animal subject being tested, determining the
XX likelihood that a subject having a pancreatic cancer will survive, or
XX determining the suitability of a subject having a pancreatic cancer for
XX surgical resection therapy; (2) detecting a pancreatic cancer-associated
XX polypeptide in a biological sample; (3) determining the likelihood that a
XX subject having a pancreatic cancer will survive; and (4) monitoring the
XX efficacy of a therapeutic treatment of pancreatic cancer. A pancreatic
XX cancer-associated transcript has cytostatic activity, and can be used in
XX gene and protein therapy. A pancreatic cancer-associated transcript
XX polynucleotide, a vector comprising the polynucleotide, an isolated
XX polypeptide or an antibody that binds to the isolated polypeptide can be
XX used for diagnosing or prognosing pancreatic cancer or for preparing a
XX medicament for the treatment of pancreatic cancer. The prognostic or
XX diagnostic methods are useful for the early detection of pancreatic
XX cancer or its metastases, and for monitoring the progress of disease
XX as during remission or following surgery or chemotherapy. The present
XX sequence encodes human retinoic acid induced 3 (RAI3), which is used in
XX the exemplification of the present invention.

PT cancer and in screening for therapeutic and diagnostic agents.
PT
XX
XX Claim 1; SEQ ID NO 350; 1381bp; German.
PS
XX
XX This invention relates to a novel isolated nucleic acid associated with
CC bronchial cancer comprising 489 defined sequences given in the
CC specification. The invention may be useful for the production of
CC compounds with a cytostatic activity through the inhibition of expression
CC or activity of tumour-associated proteins. The novel DNA sequences and
CC the proteins/peptides encoded by them are used for detecting bronchial
CC cancer or determining the risk of developing it and to screen for
CC specific binding partners of the DNA or protein sequences, where the
CC binding partners are potentially useful as agents for treating or
CC diagnosing bronchial cancer. The DNA or protein sequences can also be
CC used for prognosis, detection of metastases and for secondary treatment
CC (of tumours that have been stabilised or are no longer detectable).
CC Detecting abnormal expression of the DNA sequences provides early
CC diagnosis of bronchial cancers. The present sequence is that of a novel
CC bronchial cancer-associated human gene sequence of the invention.

XX
XX Novel isolated antibody capable of binding to tumor-associated antigenic
PT target polypeptide, useful for treating cell proliferative disorder e.g.
PT cancer.
XX
XX Claim 1; SEQ ID NO 40; 337pp; English.
PS
XX
XX The invention relates to a novel isolated antibody binding to a
CC polypeptide having at least 80% sequence identity to a polypeptide having
CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
CC specification, a polypeptide having any one of (AEA00127-AEA00202),
CC lacking its associated signal peptide, or an extracellular domain of a
CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
CC An antibody of the invention has cytostatic activity. The antibody is
CC useful for inhibiting growth of a cell expressing TAT188, which involves
CC contacting the cell with the antibody. The cell is a cancer cell chosen
CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
CC liver cell. The cancer cell is a mammalian cell, preferably a human cell.
CC The antibody is also useful for detecting the level of TAT188
CC polypeptide expressed in a test cell relative to a control cell, and for
CC detecting the level of TAT188 polypeptide or a polypeptide having at
CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test
CC cell relative to a control cell. The antibody is useful for treating a
CC preventing a cell proliferative disorder associated with increased
CC expression or activity of a polypeptide having at least 80 % identity to
CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
CC The method of the invention is useful for inhibiting the growth of a
CC cancer cell. The present sequence encodes a polypeptide of the invention.

XX
XX Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
PT to tumor-associated antigenic target polypeptide, useful for diagnosing
PT or treating cancer.
XX
XX Claim 1; SEQ ID NO 40; 96pp; English.
XX
XX This invention relates to a novel isolated antibody, for example anti-E16
CC or anti-TAT112 antibody, that binds to a tumor-associated antigenic
CC target polypeptide (TAT) and that lacks an associated signal peptide
CC sequence. The invention may be useful for the development of compounds
CC with a cytostatic activity acting as antagonists of the TAT118
CC polypeptide or RNA interference whilst the disclosed sequences may be
CC useful for gene therapy. The invention is useful for inducing the death
CC of a cell (such as a cancer cell chosen from breast, colon, rectum,
CC endometrium, kidney, lung, ovary, skin and liver) to which it binds,
CC inhibiting proliferation or promoting cell death of a cell expressing
CC TAT118. In addition, the invention may be useful for detecting the level
CC of TAT118 polypeptide in a test cell relative to a control cell, or
CC treating or preventing a cell proliferative disorder associated with
CC increased expression of TAT118. The novel antibody of the invention is
CC useful for inhibiting the growth of a cancer cell and may be useful for
CC diagnosing or treating cancer. The present sequence is that of the human
CC TAT115 cDNA which encodes a protein against which an antibody of the
CC invention may be targeted.

XX Substance that suppresses expression of retinoic acid-inducible G-protein
PT coupled receptor-3 RAI3 gene or nucleic acid, useful for suppressing cell

PT growth, and as pharmaceutical or therapeutic agent of breast cancer.
 XX Claim 1; SEQ ID NO 2; 22pp; Japanese.
 XX
 CC The invention relates to a novel substance which suppresses the
 CC expression of a retinoic acid-inducible G-protein coupled receptor (RAI) 3
 CC gene. The RAI3 gene suppressing agent is useful for suppressing cell
 CC growth, and as a pharmaceutical or therapeutic agent of breast cancer,
 CC and is also useful in identifying a cell growth inhibitory substance. The
 CC RAI3 gene suppressing agent enables the identification of a cell growth
 CC inhibitory substance. This polynucleotide sequence represents the
 CC retinoic acid-inducible G-protein coupled receptor 3 gene of the
 CC invention.

 CC respiratory disorders, neurological disorders, gastrointestinal disorders
 CC and urinary system disorders. Ovarian antigen polypeptides and
 CC polynucleotides may also be used in screening for compounds which
 CC modulate ovarian antigen expression or activity. The polynucleotides may
 CC further be used for gene therapy, chromosome mapping, in the
 CC identification of individuals and in forensic analysis, and the
 CC polypeptides may be used as food additives or to prepare antibodies
 CC useful in disease diagnosis, drug targeting and phenotyping. The present
 CC sequence represents cDNA encoding a human ovarian antigen of the
 CC invention. Note: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX PT New nucleic acid differentially expressed in pancreatic tumor tissue, for
XX PT use as diagnostic agents and in screening for therapeutic agents.
XX PS Claim 1; SEQ ID NO 42; 28pp; German.
XX CC The invention relates to a novel human nucleic acid sequence of the
XX CC pancreas and its encoded protein. The invention further comprises:
XX CC proteins and peptides, preferably isolated, that contain a sequence
XX CC encoded by the novel nucleic acid; and methods for diagnosis and
XX CC treatment of pancreatic cancer, using a substance that inhibits or binds
XX CC to the protein or its DNA, including: an antisense oligonucleotide, short
XX CC interfering RNA or ribozyme directed against the pancreatic protein, an
XX CC organic molecule, particularly having a molecular weight below 5000,
XX CC especially 300, that binds to the pancreatic DNA, an aptamer or
XX CC (monoclonal) antibody, preferably human or humanized, that binds to the
XX CC pancreatic DNA, or an anti-idiotypic antibody raised against the
XX CC monoclonal antibody, any of which may be derivatized with a reporter
XX CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel
XX CC human pancreatic proteins and their encoding DNA have cytostatic
XX CC activity. The novel sequences are useful for inhibiting transcription
XX CC and/or expression of genes and proteins associated with pancreatic
XX CC cancer. This polynucleotide sequence represents the DNA encoding one of
XX CC the novel human pancreatic proteins of the invention. Note: This sequence
XX CC is not shown in the specification, it has been electronically downloaded
XX CC from a DVD-rom provided with this specification by the European Patent
XX CC Office.

XX
XX Identifying reporter and target genes for particular biological pathway
PT of interest, useful for drug designing, involves identifying a gene which
PT clusters to geneset associated with biological pathway.
XX
PS Claim 45; Fig 8; 239pp; English.
XX
CC The present sequence represents a reporter gene from the ergosterol
CC pathway. The specification also describes reporter genes from the protein
CC kinase C pathway, and the invasive growth pathway. The genes are
CC identified using methods of the invention. The specification describes
CC methods for identifying a reporter gene or a target gene for a particular
CC biological pathway in a cell. The methods comprise identifying a gene
CC which clusters to a geneset associated with the pathway. The gene
CC identified is necessary for normal function of the pathway. The methods
CC are useful for analysing the activity of biological pathways and in drug
CC designing, drug therapies, or other biological agents e.g. insecticides,
CC herbicides, fungicides, antibodies or antivirals. The reporter gene is
CC useful as a specific target for drugs which are designed to enhance,
CC inhibit or modulate a particular biological pathway

XX Transformation of cells with a fusion protein of an orphan receptor
PT protein with a fluorescent protein useful for identification of ligands
PT to the orphan receptor.
XX
XX Example 4; SEQ ID NO 196; 594pp; Japanese.
PS
XX This invention relates to a novel method of identifying ligands to an
CC orphan receptor protein which comprises transforming cells with DNA
CC encoding a fusion protein of the orphan receptor with a fluorescent
CC protein, so that the fusion protein is expressed in the cells (or cell
CC membranes isolated from them) and contacting the cells with the potential
CC ligand to be tested. A suitable fluorescent protein for incorporation in
CC the fusion protein is green fluorescent protein (GFP), for example GFP-1,
CC wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the
CC identification of ligands binding to an orphan receptor protein.

XX
XX Nucleic acid array for detecting cancer-associated (CA) nucleic acid,
PT consists of nucleic acid probes having specific contiguous nucleotides of
PT CA polynucleotide.
XX
XX Disclosure; SEQ ID NO 52; 264pp; English.
XX
XX The invention relates to a novel nucleic acid array (I) for detecting a
CC cancer-associated (CA) nucleic acid, consisting of 2 or more nucleic acid
CC probes each comprising 10 or more contiguous nucleotides of 2 or more CA
CC polynucleotide sequences, or its complement. The invention has cytostatic
CC activity. The nucleic acid array is useful for detecting a CA nucleic
CC acid. An antibody of the invention is useful for detecting the presence
CC or absence of cancer cells. A method of the invention is useful for
CC inhibiting expression of a CA gene in a cell, or for treating cancer. The
CC CA polynucleotide or polypeptide as mentioned in (I) or (II) is useful as
CC vaccine for treating cancer e.g. lymphoma or leukemia. The present
CC sequence represents a human genomic sequence encoding a CA polypeptide
CC (CAP) of the invention.

XX
XX Producing a tobacco plant having decreased expression of a nicotine
PT demethylase gene comprises crossing a first tobacco plant with a second
PT tobacco plant and germinating the collected seed of an F1 progeny plant.
XX
XX Claim 32; SEQ ID NO 1152; 641pp; English.
XX
XX The invention relates to a breeding method for producing a tobacco plant
CC with reduced expression of a nicotine demethylase gene comprises crossing
CC a first tobacco plant with variant nicotine demethylase gene expression
CC with a second tobacco plant with at least one phenotypic trait to produce
CC an F1 progeny plant, the seed of which is collected and germinated to
CC produce a tobacco plant having reduced expression of a nicotine
CC demethylase gene. Also included are breeding a nicotine demethylase
CC deficiency trait into a tobacco plant, producing a tobacco seed,
CC developing a tobacco plant in a tobacco breeding program, a tissue
CC culture of regenerable tobacco cells obtained from the tobacco plant of
CC the invention, producing a tobacco product, a breeding method for
CC producing a tobacco plant having a modified attribute, a method of
CC breeding an attribute into a tobacco plant, a tobacco plant or its
CC components produced by the method of breeding a nicotine demethylase
CC deficiency trait into a tobacco plant, producing a tobacco seed, producing
CC a tobacco plant having a modified attribute or developing a tobacco plant
CC in a tobacco breeding program, an isolated genetic marker comprising a
CC nucleic acid sequence that is substantially identical to a nucleic acid
CC sequence given in the specification (the nucleic acids comprise isolated
CC cytochrome p450 cDNAs), an expression vector comprising the isolated nucleic acid
CC sequence, a plant or plant component comprising the isolated nucleic acid
CC sequence, a plant produced from a germinated seed of the plant, reducing
CC the expression or enzymatic activity of a constitutive, or an ethylene
CC induced or senescence induced tobacco polypeptide in a plant cell, and
CC increasing the expression or enzymatic activity of a constitutive, or an
CC ethylene or senescence induced tobacco polypeptide in a plant cell. The
CC phenotypic trait comprises disease resistance, high yield, high grade
CC index, curability, curing quality, mechanical harvestability, holding
CC ability, leaf quality, height, maturation, stalk size, or leaf number per
CC plant. The breeding method for producing a tobacco plant having decreased
CC expression of a nicotine demethylase gene is useful developing desirable
CC (non-genetically engineered) germplasm. The plant is useful in producing
CC (smokeless) tobacco products. The tobacco product is a moist or dry
CC snuff, a chewing tobacco, a cigarette product, a cigar product, a
CC cigarillo, a pipe tobacco, or bidis. The p450 cDNAs were isolated using
CC degenerate PCR primers designed against cytochrome p450 motifs. The
CC present sequence is a cytochrome p450 cDNA of the invention.

XX XX Determining open reading frames of genome of an organism e.g. a human

XX PT suffering from cancer involves use of single oligonucleotide primer at

XX PT low stringency for preparing single-stranded cDNA from mRNA of

XX PT individual.

XX XX Example 7; Page 56; 959pp; English.

XX XX The invention describes a method of determining open reading frames in

XX CC the genome of organism, comprising contacting mRNA from cell of organism

XX CC with a single oligonucleotide primer (I) at low stringency, preparing

XX CC single-stranded cDNA by reverse transcribing mRNA with (I), amplifying

XX CC cDNA, sequencing the product, and repeating the contacting, preparing

XX CC and amplifying steps with different primers and sequencing resulting

XX CC nucleic acids. The method is useful for: determining that a known

XX CC nucleotide sequence of a genome of an organism corresponds to a

XX CC nucleic acid molecule from a genome of an organism; and for sequencing

XX CC all or part of a genome of an organism. mRNA is obtained from mammalian

XX CC or human cell which is associated with a pathological condition e.g. a

XX CC colon cancer or breast cancer cell. The method is useful for analyses of

XX CC populations of subjects and can be used to carry out genetic analyses of

XX CC large or small populations. further, it can be used to study living

XX CC systems to determine if, e.g. there have been genetic shifts which render

XX CC an individual or population more or less likely to be afflicted with

XX CC diseases such as cancer, to determine antibiotic resistance or non-

XX CC tolerance, and so forth. The method can also be used in the study of

XX CC congenital diseases, and the risk of affliction to a fetus, as well as

XX CC the study of whether the conditions are likely to be passed to offspring

XX CC through ova or sperm. The analyses for pathological conditions can be

XX CC carried out in all animals, plants, birds, fish, etc. Using this method,

XX CC in the area of agriculture, for example the genomes of food crops can be

XX CC studied to determine if resistance genes are present, defects in plant

XX CC genomes can also be studied in this way. Similarly, the method permits

XX CC determination of the pathogens which integrate into the genome, such as

XX CC retroviruses and other integrating viruses such as influenza virus, have

CC undergone shifts or mutations, which may require different approaches to
CC therapy. This method is also applied to eukaryotic pathogens, such as
CC trypanosomes, different types of Plasmodium, etc. The method essentially
CC eliminates sequencing of non-coding portions. This sequence represents a
CC polynucleotide isolated from human colon cancer cell cDNA library

XX Dumas Milne Edwards J, Duclert A, Giordano J;

XX WPI; 2000-500381/45.

XX New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT diagnostic, forensic, gene therapy and chromosome mapping procedures.

XX Claim 1; SEQ ID NO 32761; 71pp + Sequence Listing; English.

XX The present sequence is one of a large number of 5' ESTs derived from
CC mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC identified within the present sequence. The 5' ESTs were prepared from
CC total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC sequences usually correspond mainly to the 3' untranslated region (UTR)
CC of the mRNA because they are often obtained from oligo-dT primed cDNA
CC libraries. Such ESTs are not well suited for isolating cDNA sequences
CC derived from the 5' ends of mRNAs and even in those cases where longer
CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC They are used to obtain upstream regulatory sequences and to design
CC expression and secretion vectors

XX Polynucleotides encoding digestive system antigens, useful for
XX diagnosing, treating, preventing and/or prognosing disorders of the
XX digestive system, particularly cancer and cancer metastases.
XX Claim 1; SEQ ID NO 784; 986pp; English.
XX
XX The present invention provides the protein and coding sequences of a
XX number of human digestive system antigens. These can be used in the
XX diagnosis, treatment and prevention of digestive system disorders,
XX including cancer, Meckel's diverticulum, bacterial or parasitic
XX infections, appendicitis, Hirschsprung's disease, chronic colitis or
XX ulcerative colitis. The present sequence is a cDNA encoding a digestive
XX system antigen of the invention

XX
XX Polynucleotides encoding digestive system antigens, useful for
PT diagnosing, treating, preventing and/or prognosing disorders of the
PT digestive system, particularly cancer and cancer metastases.
XX
XX Disclosure; SEQ ID NO 4032; 986pp; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a genomic DNA fragment
CC encoding a digestive system antigen of the invention

XX Inhibiting growth of a neuronal cell for treating epilepsy, comprises
PT contacting a cell with EFHC1 or its analog, or an EFHC1 agonist.

XX Example 11; SEQ ID NO 8; 131pp; English.

XX This invention describes a novel of inhibiting growth of a neuronal cell
CC and comprises contacting the cell with EFHC1 or its analog, or an EFHC1
CC agonist e.g. an R-type voltage-dependent Ca²⁺ channel. The invention also
CC describes: a) a method of potentiating an epilepsy therapy in a patient
CC by administering EFHC1 or its analog, or EFHC1 agonist, and administering
CC an anti-epileptic drug; b) a method of identifying agents that promote
CC cell death in a mammalian cell; c) a method of identifying an agent that
CC modulates activity of an EFHC1 polypeptide; d) a method of identifying a
CC agent that modulates activity of an apoptotic drug by providing a
CC mammalian cell or mammalian cell culture engineered to overexpress EFHC1;
CC e) a method of monitoring the efficacy of an epilepsy treatment by
CC detecting levels of AEF99260 or AEF99261 where an increased level of the
CC EFHC1 polypeptide or EFHC1 polynucleotide or gene copy number in the
CC biological sample compared to the level or copy number in a biological
CC sample from the patient before the treatment is indicative of efficacious
CC treatment; f) a method of diagnosing epilepsy in a mammalian subject; g)
CC a vector or host cell containing a nucleic acid encoding an EFHC1
CC polypeptide; h) an antibody that specifically binds to an EFHC1
CC polypeptide; and i) a diagnostic kit comprising a solid support
CC (nitrocellulose, latex or plastic material), a detection reagent (anti-
CC immunoglobulin, protein G, protein A or lectin) and a reporter group is
CC chosen from radioisotopes, fluorescent groups, luminescent groups,
CC enzymes, biotin and dye particles. the anti-epileptic drug promotes
CC apoptosis and is chosen from carbamazepine, ethosuximide, CBZ epoxide,
CC lamotrigine, oxcarbazepine, sodium valproate, acetazolamide, clobazam,
CC clonazepam, gabapentin, levetiracetam, phenobarbital, phenytoin,
CC piracetam, primidone, tiagabine, topiramate, zonisamide or vigabatrin.
CC The methods of the invention are used to a) inhibit growth of a neuronal

CC cell; b) potentiate an epilepsy therapy in a patient; c) potentiate
CC treatment for juvenile myoclonic epilepsy (JMC); d) monitor the efficacy
CC of epilepsy treatment and e) enables improvement of epilepsy treatment
CC without causing substantial toxicity. This sequence represents a splice
CC variant of the human BFHCl gene used in the invention.

PT New human nucleic acid-associated protein (NAAP) and polynucleotide,

PT useful for diagnosing, treating, and preventing disorders associated with

PT aberrant expression of NAAP, e.g. cancer, AIDS, stroke or infection.

XX

XX Claim 5; SEQ ID NO 88; 443pp; English.

XX

CC The invention relates to novel human nucleic acid-associated proteins and

CC genes encoding them, sequences that have at least 90-99 % identity to the

CC sequences; or biologically active or immunogenic fragments of these. The

CC polypeptides and polynucleotides are useful in diagnosing, treating and

CC preventing disorders associated with aberrant expression of NAAP, such as

CC cell proliferative (e.g. cancer or atherosclerosis), neurological (e.g.

CC syndrome), autoimmune/inflammatory (e.g. AIDS or allergies), or
CC infections. These may also be used as elements on a microarray which may
CC monitor or measure protein-protein interactions, drug-target
CC interactions, and gene expression profiles. The polynucleotide may also
CC be used in chromosomal mapping and in various diagnostic assays. These
CC are also useful in assessing the effects of exogenous compounds on the
CC expression of nucleic acids and amino acid sequences of NAAP, in
CC facilitating drug discovery process, and in investigating the
CC pathogenesis of diseases or medical conditions. This sequence corresponds
CC to the gene encoding one of the proteins of the inventions.

XX PS Claim 1; SEQ ID NO 3645; 7273pp; English.

XX CC The invention relates to human tumour-associated antigenic target (TAT)
XX CC polypeptides, and their related nucleic acids. The TAT polypeptides are
XX CC overexpressed in cancer tissues compared to normal tissues, and may thus
XX CC serve as effective targets for the diagnosis and treatment of cancer in
XX CC mammals. The invention also relates to nucleic acid and polypeptide
XX CC sequences at least 80% identical to the TAT nucleic acids and
XX CC polypeptides, expression vectors and host cells comprising a TAT nucleic
XX CC acid; an antibody specific for a TAT polypeptide; a peptide or organic
XX CC molecule which binds to a TAT polypeptide; fusion proteins comprising a
XX CC TAT polypeptide; and methods and compositions for the treatment or
XX CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
XX CC antibodies, antagonists, binding molecules and compositions are useful
XX CC for diagnosing or treating a cell proliferative disorder associated with
XX CC increased TAT expression, particularly cancers such as breast cancer,
XX CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
XX CC cancer, pancreatic cancer, cervical cancer, cancers of the central
XX CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be
XX CC used as hybridisation probes, in chromosome and gene mapping, in
XX CC chromosome identification and in gene therapy. The present sequence
XX CC represents a TAT nucleic acid of the invention

CC	nucleic acid sequences useful as a biomarker for a disease to be
CC	detected. (M1) involves identifying nucleic acid sequences comprising
CC	methylated CpG site in promoter-first exon region and that are down-
CC	regulated in diseased cells, comparing expression level of nucleic acid
CC	sequences with that of demethylated nucleic acid sequences and
CC	identifying nucleic acid sequences exhibiting increase in expression
CC	after demethylation. Also described: (1) detecting (M2) the presence or
CC	stage of a disease in a subject, which involves determining the degree of
CC	methylation of one or more CpG sites on nucleic acid sequences in a
CC	biological sample obtained from the subject, and determining the presence
CC	of, predisposition to, or stage of the disease in the subject based on
CC	the degree of methylation; (2) monitoring the onset, progression, or
CC	regression of a disease in a subject; (3) determining the efficacy of a
CC	test compound for inhibiting a disease in a subject; and (4) a kit (1)
CC	useful for diagnosis, prognosis, staging, monitoring, and therapeutic
CC	treatment of a disease. (M1) is useful for identifying one or more
CC	nucleic acid sequences useful as a biomarker for a disease to be
CC	detected, where the nucleic acid sequences are useful for detecting, the
CC	presence or stage of a disease such as cancer e.g. colorectal cancer in a
CC	subject. The present sequence represents a specifically claimed human
CC	genomic sequence for use in the method of the invention. Note - The
CC	sequence data for this patent is not represented in the printed
CC	specification but was obtained in electronic format from the USPTO web
CC	site.

 CC The invention comprises then amino acid and coding sequences of cancer-
 CC associated (CA) genes isolated from Nanoarchaeum equitans. The invention
 CC also comprises the Nanoarchaeum equitans genome. The DNA and protein
 CC sequences of the invention are useful for diagnosing and treating cancer
 CC (e.g. carcinoma, lymphoma, or leukaemia). The present DNA sequence
 CC represents a Nanoarchaeum equitans CA gene of the invention.

 PT one or more nucleic acids and/or modifying level or activity of one or
 PT more proteins.
 XX
 PS Claim 1; SEQ ID NO 929; 134pp; English.
 XX
 CC This invention relates to a novel method for altering one or more plant
 CC characteristics. Specifically, it refers to identifying genes that are up
 CC - or down-regulated in transgenic plants overexpressing the heterodimeric
 CC E2Fa/Dpa transcription factor of Arabidopsis and using these sequences to
 CC alter plant characteristics accordingly. The present invention describes
 CC generating transgenic plants for the production of growth regulators,
 CC enzymes, therapeutics, pharmaceuticals and animal feed products, where
 CC the altered plant characteristics are selected from increased yield or
 CC biomass, enhanced survival capacity, stress tolerance, plant architecture

or physiology, altered endoreduplication, biochemistry, signal
 transduction, storage lipid mobilisation and/or altered photosynthesis,
 each relative to the corresponding wild type plants. Accordingly, these
 sequences can also be useful as positive or negative selectable markers
 during transformation of cells or tissues. The identified genes play a
 role in a variety of biological processes such as DNA replication, cell
 wall biosynthesis, nitrogen and/or carbon metabolism or they function as
 CC transcription factors. This polynucleotide sequence is thale cress cDNA
 CC upregulated 1.3 fold or more in plants overexpressing the E2Fa/Dpa
 CC transcription factor, given in an exemplification of the invention.

(HUMA-) HUMAN GENOME SCI. INC.

Rosen CA. Barash SC. Ruben SM:

WPI; 2001-488783/53.
P-PSDB: AAU15945.

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.

Claim 1: SEQ ID NO 111: 980pp: English.

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis the polypeptides can also be used

CC as a food additive or preservative to increase or decrease storage
CC capabilities, fat content, lipid, protein, carbohydrate, vitamins,
CC minerals, cofactors and other nutritional components. The present
CC sequence encodes a novel secreted protein of the invention. Note: The
CC sequence data for this patent did not form part of the printed

XX New ovarian specific nucleic acid, useful as a vaccine, in gene therapy,
PT or for identifying, diagnosing, monitoring, staging, imaging and treating
PT ovarian cancer and non-cancerous disease states of the ovary.

XX Example 1; Page 162-163; 220pp; English.

XX The invention relates to a novel isolated ovarian specific nucleic acid.
CC A nucleic acid sequence of the invention has cytostatic activity. The
CC ovarian specific nucleic acid or a polypeptide encoded by it is useful
CC for identifying, diagnosing, monitoring, staging, imaging and treating
CC ovarian cancer and non-cancerous disease states of the ovary. The ovarian
CC specific nucleic acid molecule or polypeptide is also useful as a
CC vaccine, in gene therapy, for producing transgenic animals and cells, or
CC producing engineered ovarian tissue for treatment and research. The
CC antibody that specifically binds to the polypeptide is useful for
CC treating a patient with ovarian cancer, particularly for inducing an
CC immune response against the ovarian cancer cell expressing the nucleic
CC acid molecule or polypeptide. The sequences shown in ADB81628-ADB81688
CC represent human ovarian specific genes (OSG's) of the invention.

XX Novel nucleic acids and polypeptides, useful for treating disorders such
PT as central nervous system injuries.

XX Claim 1; SEQ ID NO 4905; 10078pp; English.

XX The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC encoded polypeptides (AAM38642-AAM42213) with nootropic,

CC immunosuppressant and cytostatic activity. The polynucleotides are useful
CC in gene therapy. A composition containing a polypeptide or polynucleotide
CC of the invention may be used to treat diseases of the peripheral nervous
CC system, such as peripheral nervous injuries, peripheral neuropathy and
CC localised neuropathies and central nervous system diseases, such as
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC utilisation of the activities such as: Immune system suppression,
CC Actin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC assays for receptor activity, arthritis and inflammation, leukaemias and
CC C.N.S disorders. Note: The sequence data for this patent did not form
CC part of the printed specification

XX
XX New polynucleotides derived from human prostate, useful for modulating
XX immune response to prevent or treat cancer.
XX
XX Claim 1; SEQ ID NO 1465; 189pp; English.

XX This invention relates to novel isolated polynucleotides of human origin,
CC particularly isolated from the human prostate. Specifically, it refers to
CC the diagnostics and therapeutics comprising these novel human
CC polynucleotides, and includes the derived probes, antisense
CC oligonucleotides and antibodies thereof. The identification of these
CC human prostate genes that can inhibit tumour growth is useful for
CC understanding the progression and nature of complex diseases such as
CC cancer, and hence they are important in the drug discovery process. The
CC present invention describes these polynucleotides and encoded
CC polypeptides as exhibiting cytostatic activity, and through gene therapy
CC and/ or vaccines they can be used to modulate the immune response for the

CC prevention or treatment of cancers, particularly of the prostate, but
CC also for breast, lung and colon cancer. This polynucleotide sequence is a
CC human cDNA sequence useful for the treatment of cancer, used in an
CC exemplification of the invention. NOTE: These sequences are not given in
CC the specification but are provided on the WIPO website.

XX
XX New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.
XX
XX Claim 1; SEQ ID NO 557; 103pp; English.

XX The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activity. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC coding sequences of the invention. Note: The sequence data for this

CC patent did not appear in the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX PT Determining the presence or absence of a pathological cell in a patient,
XX useful for diagnosing, prognosing or treating cancer, comprises detecting
XX a nucleic acid in a biological sample.

XX PS Claim 8; SEQ ID NO 213; 1385pp; English.

XX The invention relates to nucleic acids and proteins (ADN38893-ADN40064)
CC whose expression is upregulated or downregulated in specific cancers or
CC other diseases such as angiogenic or fibrotic disorders, and to methods
CC of determining the presence or absence of a pathological cell in a
CC patient by detecting a nucleic acid at least 80% identical to those of
CC the invention or by detecting a polypeptide of the invention. The
CC invention also relates to expression vectors and host cells comprising a
CC nucleic acid of the invention; antibodies which specifically bind a
CC polypeptide of the invention; use of such antibodies for drug targeting;
CC and methods of screening for modulators of activity or expression of the
CC polypeptides and nucleic acids. The nucleic acids, polypeptides,
CC antibodies and methods are useful for diagnosing, prognosing and treating
CC cancer and other conditions such as psoriasis, ischaemia, heart disease,
CC atherosclerosis, inflammatory diseases, autoimmune diseases, retinal
CC neovascularisation syndromes, scarring and uterine fibroids. They may
CC also be useful in wound healing and in contraception. The present
CC sequence represents a nucleic acid sequence of the invention.

XX PT New regulatory nucleic acid, useful for preparing transgenic plants with
XX altered seed testa, provides specific expression of attached genes in
XX seed endothelium and albumen.

XX PS Disclosure; Page 80; 85pp; French.

XX The present sequence represents a plant regulatory polynucleotide, which
CC was used to construct plasmid pBan2. The present sequence is a fragment
CC of the sequence given in ACC43789, which comprises regulatory sequences
CC that allow expression of a polynucleotide specifically in the endothelium
CC and/or albumen of plant seeds. The regulatory polynucleotide, and derived
CC expression cassettes or vectors, are used to produce transgenic plants in
CC which development of seed testa is altered, especially for reducing the

CC size or number of seeds, particularly complete absence of mature, fertile
CC seeds, or modulating contents of flavonoids, tannins and cellulose
CC (especially to produce maize and rape seeds with less intense yellow
CC colour, or to alter nutritional properties)

XX New rice promoter, useful for manipulating crop plants to alter or
PT improve phenotypic characteristics, e.g. produce large quantities of oil
PT or proteins, resistance to insecticides, virus or fungi, stress tolerance
PT or high nutritional value.

XX Claim 1; SEQ ID NO 2386; 230pp; English.

XX The invention relates to plant nucleotide sequences that direct seed-,
CC leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential
CC or constitutive transcription of an operatively linked nucleic acid
CC segment. The invention also relates to a method for augmenting a plant

CC genome and a method of identifying a gene, where its expression is
CC altered in the seed, leaf, stem, panicle, pollen, root or is constitutive
CC in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,
CC canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,
CC sorghum, rice or wheat. The polynucleotides and the polypeptides they
CC encode are useful for manipulating crop plants to alter or improve
CC phenotypic characteristics, to produce large quantities of oil or
CC proteins, to incur resistance to insecticides, viruses or fungi, and to
CC incur stress tolerance (e.g. salt, cold or drought) to ensure the plants
CC have a high nutritional value with reduced apical dominance or dwarfism,
CC early flowering or altered metabolic pathways. This sequence represents a
CC plant nucleic acid of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification but was obtained in
CC electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

XX
XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 8; SEQ ID NO 15507; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAH92446 to AAH95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
XX present invention

XX Novel human disease detection and treatment polypeptide, useful in
XX diagnosis, prevention or treatment of cell proliferative disorders e.g.
XX arteriosclerosis, cirrhosis and an autoimmune/inflammatory disorder e.g.
XX AIDS.
XX Claim 1; Page 381; 618pp; English.
XX The invention relates to an isolated human disease detection and
XX treatment (MDDT) polypeptide (I) selected from a polypeptide having a
XX sequence selected from 254 sequences (ABP51231-ABP51484) given in the
XX specification, a naturally occurring polypeptide comprising a sequence
XX having at least 90% identity to (I) or a biologically active or
XX immunogenic fragment of (I). (I) is useful for screening a compound for
XX effectiveness as an agonist or antagonist, for screening a compound that
XX specifically binds (I) or modulates the activity of (I), and for
XX preparing a polyclonal or monoclonal antibody by hybridoma technology.
XX Nucleic acids (II) (ABQ72449-ABQ72700) encoding (I) are useful for
XX screening a compound for effectiveness in altering expression of a target
XX polynucleotide comprising. Oligonucleotides and antibodies are useful for
XX detecting MDDT in a sample or for assessing toxicity of a test compound,
XX in a diagnostic test for a condition or a disease associated with the
XX expression of MDDT in a biological sample, for detecting (I) in a sample,
XX and for purifying (I) from a sample. A composition comprising (I), an
XX agonist or antagonist is useful for treating a disease or condition
XX associated with decreased or increased expression of functional MDDT. (I)
XX or (II) are useful for diagnosing, treating or preventing disorders
XX associated with aberrant expression of MDDT, where the disorders are
XX selected from a cell proliferative disorder such as arteriosclerosis,
XX cirrhosis, hepatitis, psoriasis, and cancer and an
XX autoimmune/inflammatory disorder such as AIDS, Addison's disease,
XX allergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or
```

CC rheumatoid arthritis. (II) are useful for creating knockin humanised
 CC animals or transgenic animals to model human diseases, in somatic or
 CC germline gene therapy, to generate a transcript image of a tissue or cell
 CC type, for detecting differences in the chromosomal location due to
 CC translocation or inversion among normal, carrier or affected individuals
 CC and as hybridisation probes for mapping naturally occurring genomic
 CC sequences

```

CC The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostatic activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be useful for gene therapy

XX New regulatory nucleic acid, useful for preparing transgenic plants with altered seed testa, provides specific expression of attached genes in seed endothelium and albumen.

XX Claim 1; Page 75-76; 85pp; French.

XX The present sequence represents a plant regulatory polynucleotide, comprising regulatory sequences that allow expression of a polynucleotide specifically in the endothelium and/or albumen of plant seeds. The present sequence was used to produce plasmid pBan1. The regulatory polynucleotide, and derived expression cassettes or vectors, are used to produce transgenic plants in which development of seed testa is altered, especially for reducing the size or number of seeds, particularly complete absence of mature, fertile seeds, or modulating contents of flavonoids, tannins and cellulose (especially to produce maize and rape

CC seeds with less intense yellow colour, or to alter nutritional properties)

XX Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries.

XX Claim 1; SEQ ID NO 1333; 10078pp; English.

XX The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,

CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC assays for receptor activity, arthritis and inflammation, leukaemias and
CC C.N.S disorders. Note: The sequence data for this patent did not form
CC part of the printed specification

XX PT New G-protein-coupled receptor-like polypeptides and polynucleotides,
XX PT useful for treating diseases of ophthalmic, neurological, immunological
XX PT and nephritic systems and hormonal dysfunction, cancer, atherosclerosis
XX PT and diabetes.

XX PS Example 2; SEQ ID NO 1023; 92pp; English.

XX CC The invention describes an isolated polynucleotide (I) comprising a fully
XX CC defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041,
XX CC 1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as
XX CC given in the specification, its translated or protein coding portion, its
XX CC extracellular portion or its active domain. The GPCR-like polypeptides
XX CC and polynucleotides are useful for the treatment of diseases of
XX CC ophthalmic, neurological, immunological and nephritic systems. They may
XX CC also be used to treat hormonal dysfunction, cancer, atherosclerosis and
XX CC diabetes. The antibodies are useful for detecting or quantitating the
XX CC polypeptide in tissue. The polypeptides can also be used as molecular
XX CC weight markers and as a food supplement. This sequence represents a human
XX CC polynucleotide of the invention.

 /note="Organ: Eye; Vector: pCMVSPORT6; A human iris
 library (fx) was normalized by self-subtraction. One
 portion of double stranded plasmid DNA representing the
 library was linearized by NotI. This NotI digested library
 was used as a template for biotinylated RNA synthesis
 using SP6 RNA polymerase. Another portion of the double
 stranded plasmid library was converted to single-stranded
 circles in vitro using Gene II and Exonuclease III (Life
 Technologies). Single-stranded DNA (1 mg) was hybridized
 (Cot 500) with 41 mg of Bio-RNA and vector blocking
 oligonucleotides. The hybridized Bio-RNA/ss-circles were
 removed by streptavidin:phenol extraction. EST analysis
 was performed on the library at the NIH Intramural
 Sequencing Center (NISC)."

/notes="Organ: Liver; Vector: pCNS-D2; Site 1: EcoRI;

Site 2: NotI; The poly (A) + RNA was dephosphorylated with

bacterial alkaline phosphatase (BAP) and then decapped

with tobacco acid pyrophosphatase (TAP). The decapped

intact mRNA was ligated with DNA-RNA linker including

EcoRI site by treatment of T4 RNA ligase and the first

strand cDNA was synthesized from oligo dt-selected mRNA by

priming with dt-tailed vector. The dt-tailed vector was

adjusted to have about 60nt. The cDNA vector was

circularized with E. coli DNA ligase after digestion of

EcoRI which site is also included in vector. An RNA strand

converted to a DNA strand by Okayama-Berg method. The

obtained cDNA vectors were used for transformation of

competent cells E. coli Top10P' by electroporation method.

The cDNA libraries constructed by this method are

full-length enriched cDNA library. After analyzing and

sequencing about 2,000 - 3,000 colonies in original cDNA

library, the abundant cDNAs were selected and amplified by

PCR reaction using vector region primer including T7

promotor as 5' primer and N(dt)14 as 3' primer. The PCR

products were used as template for synthesis of

biotinylated single stranded RNA by in vitro transcription

reaction. The synthesized RNA probes were hybridized with

antisense single stranded cDNAs prepared from original

library and incubated with avidin-gel. After removing

DNA-RNA hybrids by centrifuge, the subtracted cDNA

libraries were constructed by transfection of the

/notes="Organ: Stomach; Vector: pcNS; Site: 1: EcoRI;
Site 2: NotI; The poly (A)+ RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then deacapped
with tabacco acid pyrophosphatase (TAP). The deacapped
intact mRNA was ligated with DNA-RNA linker including EcoR
I site by treatment of T4 RNA ligase and the first strand
cDNA was synthesized from oligo dt-selected mRNA by
priming with dt-tailed vector. The dt-tailed vector was
adjusted to have about 60nt. The cDNA vector was
circularized with E. coli DNA ligase after digestion of
EcoRI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
obtained cDNA vectors were used for transformation of
competent cells E. coli Top10F by electroporation method.
The cDNA libraries constructed by this method are
full-length enriched cDNA library."

 /notes="Vector: FWD42nv; Purified genomic DNA from M.
 musculus C57BL/6J (male) was obtained from the Jackson
 Laboratory Mouse DNA Resource
 (http://www.jax.org/resources/documents/dnares/). The DNA
 was hydronamically sheared by repeated passage through a
 0.005 inch orifice at constant velocity. The sheared DNA
 was blunt end-repaired with T4 DNA polymerase and T4
 polynucleotide kinase. Adaptor oligonucleotides were
 ligated to the blunt ends in high molar excess. The
 adaptor DNA was purified and size-selected for a 9.5 to
 10.5 kb range using preparative agarose gel
 electrophoresis. Vector DNA was prepared from a derivative
 of pWD42 [gil4732114|gb|AF129072.1], a copy-number
 inducible derivative of plasmid R1. The vector was ligated
 with adaptors complementary to the insert adaptors and
 purified. The sheared, adaptor mouse DNA was annealed to
 adaptor vector DNA, and transformed into
 chemically-competent E. coli XL10-Gold (Stratagene) cells
 and selected for ampicillin resistance."

Clones are derived from the chimpanzee BAC library RPCI-43. This BAC
 end was generated during the R&D process and may have higher chance
 of clone tracking errors.

                 /notes="Vector: PWD42nv; Purified genomic DNA from M.
                 musculus C57BL/6J (male) was obtained from the Jackson
                 Laboratory Mouse DNA Resource
                 (http://www.jax.org/resources/documents/dnares/). The DNA
                 was hydrodynamically sheared by repeated passage through a
                 0.005 inch orifice at constant velocity. The sheared DNA
                 was blunt end-repaired with T4 DNA polymerase and T4
                 polynucleotide kinase. Adaptor oligonucleotides were
                 ligated to the blunt ends in high molar excess. The
                 adaptor DNA was purified and size-selected for a 9.5 to
                 10.5 kb range using preparative agarose gel
                 electrophoresis. Vector DNA was prepared from a derivative
                 of PWD42 (gi|4732114|gb|AF129072.1), a copy-number
                 inducible derivative of plasmid R1. The vector was ligated
                 with adaptors complementary to the insert adaptors and
                 purified. The sheared, adaptor mouse DNA was annealed to
                 adaptor vector DNA, and transformed into
                 chemically-competent E. coli XL10-Gold (Stratagene) cells
                 and selected for ampicillin resistance."

 /notes="Vector: pBluescript II SK (+) XR; Site 1: EcoRI (5' end of cDNA); Site 2: XhoI (3' end of cDNA); Sapling trees two metres in height and grown under greenhouse conditions were exposed to continuous feeding by Malacosoma disstria Hubner (forest tent caterpillar) mid-instar larvae caged on the sapling using mesh bags. Mature leaves from within the caged region were collected 2 hours, 12 hours, 24 hours and 48 hours after the onset of treatment. mRNA was isolated from each tissue source independently and equal quantities of mRNA from each tissue were then pooled. cDNA was prepared from 5 micrograms of mRNA and directionally ligated into the pBluescript II SK (+) XR vector using the pBluescript II XR cDNA Library Construction Kit according to manufacturer's instructions with modifications (Stratagene). Plasmid DNA was then transformed by electroporation into DH10B cells (Invitrogen) for propagation."

two metres in height and grown under greenhouse conditions were exposed to continuous feeding by *Cryptorhynchus lapathi* (poplar and willow borer) adults caged on the sapling using mesh bags. Bark (with phloem and cambium attached) from within the caged region was harvested 2 hours, 6 hours and 48 hours after the onset of treatment. mRNA was isolated from each tissue source independently and equal quantities of mRNA from each tissue were then pooled. cDNA was prepared from 5 micrograms of mRNA and directionally ligated into the pBluescript II SK (+) XR vector using the pBluescript II SK cDNA Library Construction Kit according to manufacturer's instructions with modifications (Stratagene). Plasmid DNA was then transformed by electroporation into DH10B cells (Invitrogen) for propagation. Normalization was applied according to published methods [Bonaldo M.F. et al. (1996) Genome Research 6(9):791] in order to reduce the abundance of highly expressed transcripts."

Clones are derived from the human BAC library RPCI-11. For BAC

library availability, please contact Pieter de Jong

(pieter@dejong.med.buffalo.edu). Clones may be purchased from

BACPAC Resources (http://bacpac.med.buffalo.edu/ordering.bac.htm)

or from Research Genetics (info@resgen.com). BAC end Web Server:

http://www.htsc.washington.edu

/note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (<http://www.jax.org/resources/documents/dnares/>). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adapted DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (G114732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adapted mouse DNA was annealed to adapted vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
